DIRECTORY OF AIRPORTS – LEGEND

CITY AND AIRPORT NAME

(AF) City and Airport Name (with C, L, M or P in Type Column) - a civil airport with Air Force operations, reserve training, or other such activity thereon.

NOTE: Similar combinations of above citation of A, N, CG, and NG indicate the same is applicable for Army, Navy, Coast Guard, and National Guard fields, respectively.

(P) City and Airport Name - Civil Airport covered by an agreement between municipality and U.S. Government which permits use by transient military aircraft.

(PC) Same legal status as (P), but closed to all USAF pilots not possessing their own clearance authority in accordance with AFR 60-16.

NOTES:

1. Where lights are owned or maintained by CAA the site number and airway abbreviation are included in the city and airport name column ie: Chadron, 15, CYS-HON.
2. USAF aircraft are permitted to use only those fields prefixed with an AF, A, N, NG, CG, P, PC.
3. When city and airport names are identical, the airport name is omitted to conserve space.
4. When city is part of airport name, a dash will appear between city and airport, such as Venice-State.

TYPE

P - Public Use L - Limited AF - Air Force

NOTES

PUBLIC USE - Intended for general use by the public at large, this category consists of:

(1) Operationally active airports (those attended during normal working hours of each day, and provide, as a minimum of service, aircraft fuel for sale at the airport.
(2) All airports serving scheduled and large irregular air carriers as regular, alternate and provisional stops.
(3) All CAA intermediate landing fields.
(4) All airports having a true light certificate to indicate a lighted airport.

Data on these airports are obtained from physical inspections made by CAA personnel.

LIMITED - All airports not qualifying as "Public Use" (see definition above).

LOCATION

The word "miles" has been eliminated because of space limitations. Mileage is that from the center of referenced city to airport.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

LOCATION (Continued)

If orientation features are less than 1/2 mile from the field, distance is not specified.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of landing area.

NUMBER OF RUNWAYS

No differentiation is made between runways and strips as far as number of landing areas in field is concerned.

LONGEST RUNWAY AND FACILITIES

In this column are included the length and surfacing of the longest runway, the lighting and servicing facilities, weather reports, and unicom available.

RUNWAYS

The length of the longest paved runway or non-paved strip is stated in hundreds of feet, using 70 as division point. If the length is not prefixed, the surface is sod, clay, gravel, etc.

h -runway is paved (concrete, asphalt or similar type of paving)
aw -allway field
(26) -runway or strip length not verified by C.A.A.

LIGHTS

B: Rotating Light (Rotating beacon)
(Green and white, split-beam and other types)
Omission of B indicates rotating light is either not available or not operating standard hours (sunset-sunrise)

NOTE: Code lights are not codified, and are carried in Remarks Column.

L: Field Lighting
L - by itself indicates temporary lighting, such as flares, smudge pots, lanterns.
1 - Portable lights (Electrical)
2 - Boundary
3 - Runway floods
4 - Runway or Strip
5 - Instrument approach (neon)
6 - High intensity runway
7 - High intensity instrument approach

* An asterisk preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise by request (circling the field or radio call).

Because the obstructions on virtually all lighted fields are obstruction lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage
S2: Storage, minor aircraft repairs
S3: Storage, minor aircraft, and minor engine repairs
S4: Storage, major aircraft, and minor engine repairs
S5: Storage, major aircraft, and major engine repairs

NOTE: Any S combination without parenthesis indicates only full-time day attendant. Fields having lighting facilities may have 24 hours attendant available.

Any S combination in parenthesis-part time or irregular attendant.

WEATHER

W: Weather reports available from Weather Bureau or CAA communications station on field.

UNICOM

U: Unicom (Aero Advisory Station transmitting and receiving on 122.8 mc). Operates during airport hours only.

FUEL OCTANE

F1: 80 oct., at least F3: 91/96 oct., and lower
F2: 80/87 oct., and lower F4: 100/130 oct., and lower

NOTE: If only one octane available, this octane cited, and not coded.

Any F combination without parenthesis indicates full time day attendant, in parenthesis part-time or irregular attendant.

REMARKS

(a) "INACTIVE" indicates usable civil field, but not being operated, at last inspection. Caution advised.
(b) "CLOSED" indicates closed to all traffic except in emergency.
(c) "ABANDONED" indicates reverted to non-airport usage such as farming or grazing.
(d) "REPORTED ABANDONED" indicates an airport reported abandoned but not verified as such by C.A.A.
(e) "FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.
(f) "Blkd" indicates approaches where glide angle to runway is 3:1 or less.
(g) "Rgt tfc N" indicates right turns should be made on landings and take-offs to N.

NOTES

1. → New or revised data.
2. SCHEDULED AIRLINE STOP: Airport names are capitalized.
3. OBSTRUCTIONS: Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, like trees, for example, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.
4. NEW AIRPORTS: At the end of each state, under this listing will be found, out of alphabetical alignment, all the new airports tabulated after the type for that state had been originally set up.

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention, W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.2 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current NOTAMS for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° of azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries

---

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (1) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification; e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occurring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also, pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

DANGER AREA PENETRATION: Information received from military authorities presents compelling evidence that civilian pilots are frequently penetrating danger areas without prior permission of the appropriate military authorities. The activities engaged in by the military within these areas present a real hazard to aircraft, since they encompass aerial gunnery, air-to-ground and ground-to- air gunnery, anti-aircraft test firing, rocket firing, bombing, and ordnance testing.

Accordingly, the Office of Aviation Safety urges that all pilots consider the consequences to themselves and to their passengers of unnecessary exposure to such hazards. It is of prime importance to the safe conduct of a flight that the pilot carefully plan the routes so as to eliminate all possibility of inadvertently penetrating any danger area, and to obtain prior permission from the military before willfully entering such area.

VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator (FPDI) centered the omnibearing selector should read 0° with the to-from indication being "From" or the omnibearing selector should read 180° with the to-from indication reading "To". Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchel which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ±4° be indicated through use of the ground check or ±6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of June 14, 1954, check points or facilities have been established at the following airports (listed under city name):

PILOTS WARNED OF MAINTENANCE IN PROGRESS AT NAVAIDS: After June 14, 1954, during routine or emergency maintenance periods, which have been advertised in the usual manner, identification will be removed from certain Federal Airways System Navaids, namely, ILS Localizers, VHF Ranges (VOR, TVOR & VAR), and L/MF Ranges. This new policy relative to signaling pilots that maintenance work is in progress at these Navaids was set forth in Federal Airways All Regional Letter No. 268, dated May 14, 1954, entitled "Removal of Identification During Maintenance Periods." The removal of identification serves as an additional warning to pilots that the facility has been officially taken over by "Maintenence" for tune-up or repair and may be unreliable even though on the air intermittently or constantly. This procedure is not to be considered in any way as a substitution for the official NOTAM covering "maintenance shutdown" but instead, is an adjunct to same as outlined above.

✓NEW AIRPORT TYPE CLASSIFICATIONS: Effective with this issue of the Guide, airports carried in the Directory and Notams will be classified by type as either "P" (Public Use) or "L" (Limited). See Airport Legend, page 26, for details of the new types.

✓MINIMUM EN ROUTE IFR ALTITUDES: Effective June 15, 1954, minimum en route IFR altitudes are amended as follows:

✓CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE and REPORTING POINT AMENDMENTS: Unless otherwise advised, the civil airway, control area, control area extension, control zone and reporting point alterations designated hereinafter are adopted to become effective 0001 EST July 6, 1954. However, in order to establish and realign the navigational facilities associated with such designations with a minimum of inconvenience to air traffic, it may be necessary to prescribe temporary designations during such period in the current Notices to Airmen. Therefore, beginning June 22, 1954, and until the effective date specified above, any person operating an aircraft along or near the controlled airspace affected by these alterations shall consult the current Notices to Airmen, available at all CAA communications stations, to determine whether any temporary designations are specified therein and comply with the applicable air traffic rules.

CIVIL AIRWAYS: (1) Green civil airway No. 6 (Laredo, Texas to Norfolk, Va.) is amended between Atlanta, Ga., and Greensboro, N. C. to read: "Atlanta, Ga. radio range station; Spartanburg, S. C. radio range station; Greensboro, N. C. radio range station;".....

(2) Amber civil airway No. 8 (Los Angeles, Calif. to The Dalles, Oregon) is amended between the Santa Barbara, Calif., rdo rng stn and the Travis AFB, Calif. rdo rng stn to read: "Santa Barbara, Calif. rdo rng stn to the intsxn of the NW crs of the Santa Barbara, Calif. rdo rng and the SW crs of the Fresno, Calif. rdo rng. From the intsxn of the NW crs of San Francisco, Calif. rdo rng and the SW crs of Travis AFB, Calif. rdo rng via Travis AFB, Calif. rdo rng stn".....

(3) Red civil arwy No. 9 is amended by changing caption to read: "(San Diego, Calif. to Casa Grande, Ariz.)" and by deleting portion which reads: "From Phoenix, Ariz. rdo rng stn via Payson, Ariz. non-directional rdo bcn to Winslow, Ariz. rdo rng stn."

(4) Red civil arwy No. 11 (Enid, Okla. to Boston, Mass.) is amended by deleting portion which reads: "From the intersection of the east course of Clear Creek, Ont., Canada, radio range and the SW course of the Buffalo, N. Y. radio range to the Dansville, N. Y. radio range to the Danville, New York radio range station." and by adding the following portion before the "Albany, New York radio range station"; "From the Erie, Penn. radio range station

(6-15-54)

via the Bradford, Pa. non-directional radio beacon; Elmira, N. Y. radio range station; Albany, N. Y. radio range station" (Note: The deleted portion above will become Red 91 Dunkirk to Syracuse; the portion Erie via Bradford to Elmira was Red 51, being revoked herein. Above necessary due to request for a direct airway Dunkirk-Dansville-Syracuse.)

(5) Red civil airway No. 25 (Tallahassee, Fla. to Miami, Fla.) is amended between Tampa and Miami to read: "Tampa, Fla., radio range station; the intsxn of the SE course of the Tampa, Fla. radio range and the N course of the Fort Myers, Fla., radio range; Fort Myers, Fla. radio range station; the intsxn of the SE course of the Fort Myers, Fla. radio range and the W course of the Miami, Fla. radio range to the Miami, Fla. radio range station." (Due to realignment NW course Ft. Myers range).

(6) Red civil airway No. 34 (Charleston, W. Va. to Weeksville, N. C.) is amended between Rocky Mount, N. C. and Weeksville, N. C. to read: "Rocky Mount, N. C. VHF VAR radio range station; the intersection of the NE course of the Rocky Mount, N. C. VHF VAR radio range and the N course of the Williamston, N. C. VHF VAR radio range to the Weeksville, N. C. (Navy) radio range station."

(7) Red civil airway No. 53 (Joplin, Mo. to Springfield, Mo.) is revoked.

(8) Red civil airway No. 51 (Erie, Pa. to Elmira, N. Y.) is revoked.

(9) Red civil airway No. 58 (Salinas, Calif. to Los Banos, Calif.) is revoked.

(10) Red civil airway No. 91 (Dunkirk, N. Y. to Syracuse, N. Y.) is added to read: "From the Dunkirk, N. Y. non-directional radio beacon via the Dansville, N. Y. non-directional radio beacon to the Syracuse, N. Y. radio range station."

(11) Red civil airway No. 101 (Tampa, Fla. to Miami, Fla.) is amended to read: "From the intsxn of the SE course of the Tampa, Fla. radio range and the N course of the Fort Myers, Fla. radio range to the Miami, Fla. radio range station."

(11a) Red civil airway No. 105 is amended by changing caption to read: "(Wichita, Kans. to Springfield, Mo.)" and by changing last portion to read: "via the Chanute, Kans. radio range station to the intsxn of the east course of the Chanute, Kans. radio range and the SW course of the Springfield, Mo. radio range." (NOTE: Extended due to decommissioning of Joplin, Mo. range and revocation of Red 53 over approximately same airspace.)

(11b) Blue civil airway No. 7 (Hollister, Calif. to Williams, Calif.) is amended by deleting the portion which reads: "From the intsxn of the NE course of the Salinas, Calif. radio range and the SE course of the Oakland, Calif. radio range to the intsxn of the SE course of the Oakland, Calif. radio range and the NW course of the Fresno, Calif. radio range." (Due to decommissioning of Salinas, Calif. range.)

(12) Blue civil airway No. 11 is amended by changing caption to read: "(Findlay, Ohio to Niagara Falls, N. Y.)" and is further amended to read: "From the Findlay, Ohio non-directional radio beacon via the Cleveland, Ohio radio range station; Erie, Pa. radio range station to the intsxn of the SW crs of the Buffalo, N.Y. radio range and E crs of the Clear Creek, Ont. Canada radio range. From the Buffalo, N.Y. radio range station to Niagara Falls, N.Y. Arpt, excluding portion which lies outside U. S. territory." (Note: This revokes the portion of Blue 11 from a point at lat. 41-28-40, long. 82-48-00 via South Bass intsxn to Mid-Lake intsxn, per ASP Meeting 362, and adds a portion from Findlay H to Cleveland LF range.)

(13) Blue civil airway No. 13 (Houston, Texas to Des Moines, Iowa) is amended by deleting portion from Van Buren, Ark., to intsxn NE crs Kansas City, Mo. and S crs Des Moines ranges

(14) Blue civil airway No. 15 is amended by changing caption to read: "(Huntington, W. Va. to Youngstown, Ohio)" and by adding a portion to present airway to read: "From the Akron-Canton Co. Arpt ILS outer marker to the Hubbard, Ohio non-directional radio beacon."

(15) Blue civil airway No. 24 (El Centro, Calif. to Daggett, Calif.) is amended to read: "From the El Centro, Calif. radio range station via the intsxn of the NW course of the El Centro, Calif. radio range and the SE course of the Daggett, Calif. radio range to the Daggett, Calif. radio range station, excluding the portion which overlaps Salton Sea danger area (D-303)" (Note: Due to decommissioning Thermal, Calif. July 6, airway reworded).

(16) Blue civil airway No. 46 (Memphis, Tenn. to Paducah, Ky.) is amended to read: "From the Memphis, Tenn. radio range station via the intsxn of a line bearing 01° true from the Memphis, Tenn. radio range station and a line bearing 216° true from the Dyersburg, Tenn. non-directional radio beacon; Dyersburg, Tenn. non-directional radio beacon to the Paducah, Ky. non-directional radio beacon."

(17) Blue civil airway No. 54 is amended by changing caption to read: "(Evergreen, Calif. to Hamilton AFB, Calif.)" and is further amended to read: "From the Evergreen, Calif. non-directional radio beacon to the San Francisco, Calif. radio range station. From the intsxn of the NW course of the Oakland, Calif. radio range and the SW course of the Travis AFB, Calif. radio range to a point at lat. 38-02-45, long. 122-31-40." (Note: This cancels portion of Blue 54 from Salinas, Calif. range station to Evergreen H facility, due to decom. Salinas range.)

(18) Blue civil airway No. 60 (Sunnyvale, Calif. to Stockton, Calif.) is amended to read: "From the Moffett NAS, Sunnyvale, Calif. radio range station to the intsxn of the NE course of the Moffett NAS, Calif. radio range and the W course of the Stockton, Calif. radio range." (Note: Portion deleted from intsxn NW Salinas and SW Moffett to Moffett NAS range station, due to decommissioning of Salinas, Calif. range.)

(19) Blue civil airway No. 61 (Springfield, Mo. to Kansas City, Mo.) is amended to read: "From the Springfield, Mo. radio range station via the intsxn of the NW course of the Springfield, Mo. radio range and the SE course of the Kansas City, Mo. radio range to the Kansas City, Mo. radio range station." (Note: Reworded and extended into Kansas City due to decom. of Joplin range and revocation part of Blue 13.)

(20) Blue civil airway No. 62 (Ypsilanti, Mich. to Traverse City, Mich.) is amended to read: "From the intsxn of the W course of the Detroit, Mich. radio range and the S course of the Salem, Mich. VHF VAR radio range via the Salem, Mich. VHF VAR radio range station: Saginaw, Mich. non-directional radio beacon; Gladwin, Mich. non-directional radio beacon to the Traverse City, Mich. radio range station." (Note: Flint, Mich. H facility removed from airway designation; being decommissioned July 6.)

(21) Blue civil airway No. 79 (Petersburg, Alaska to U. S.-Canadian Border) is added to read: "That airspace over U. S. territory from the Petersburg, Alaska radio range station via the Haines, Alaska non-directional radio beacon to the Pon Lake, Y. T., Canada, non-directional radio beacon."

VOR AIRWAYS

(1) VOR civil airway No. 4 (Seattle, Wash. to Washington, D. C.) is amended by changing all after the Louisville, Ky. omnirng station to read: "Louisville, Ky. omnirng station, including a north alternate from the Evansville omnirng station to the Louisville omnirng station; Lexington, Ky. omnirng station, including a north alternate via the intsxn of the Louisville omnirng 083° true and the Lexington omnirng 294° true radials and also a south alternate via the intsxn of the Louisville omnirng 123° true and the Lexington omnirng 264° true radials; Charleston, W. Va., omnirng station; Elkins, W. Va., omnirng station, including a north alternate via the intsxn of the Charleston omnirng 046° true and the Elkins omnirng 264° true radials and also a south alternate via the intsxn of the Charleston omnirng 081° true and the Elkins omnirng 227° true radials; Front Royal, Va. omnirng station; Herndon, Va. omnirng station to the point of intsxn of the Herndon omnirng 089° true and the Washington, D. C. terminal omnirng 351° true radials."

(2) VOR civil airway No. 14 (Roswell, N. Mex. to Boston, Mass.) is amended by changing all after the Gardner, Mass. omnirng station to read: "Gardner, Mass. omnirng station to the point of intsxn of the Gardner omnirng 114° true and the Boston, Mass. omnirng 223° true radials."

(3) VOR civil airway No. 23 (San Diego, Calif. to Bellingham, Wash.) is amended by changing all after the Seattle, Wash. omnirng station to read: "Seattle, Wash. omnirng station; intersection of the Seattle omnirng 359° true and the Bellingham omnirng 169° true radials; Bellingham, Wash. omnirng station to the U. S. Canadian Border via the Bellingham omnirng 304° true radial."

(4) VOR civil airway No. 96 (Lafayette, Ind. to Toledo, Ohio) is amended to read: "From the Lafayette, Ind. omnirng station via the intsxn of the Lafayette omnirng 079° true and the Fort Wayne omnirng 226° true radials; Fort Wayne, Ind. omnirng station to the Waterville, Ohio omnirng station."

(5) VOR civil airway No. 108 (Charleston, W. Va. to Richmond, Va.) is added to read: "From the Charleston, W. Va. omnirng station via the Montebello, Va. omnirng station to the Flat Rock, Va. omnirng station."

(6) VOR civil airway No. 128 (Charleston, W. Va. to Raleigh, N. C.) is amended to read: "From the Charleston, W. Va. omnirng station via the Pulaski, Va. omnirng station; Greensboro, N. C. omnirng station to the Raleigh, N. C. omnirng station."

(7) VOR civil airway No. 140 (Nashville, Tenn. to New York, N. Y.) is amended to read: "From the Nashville, Tenn. omnirng station via the intsxn of the Nashville omnirng 059° true radial and the Corbin VAR W aural course; Corbin, Ky. VAR station; Paynesville, W. Va. non-directional radio beacon; Montebello, Va. omnirng station to the Herndon, Va. omnirng station. From the Baltimore, Md. omnirng station to the point of intsxn of the Baltimore omnirng 045° true radial with the Dover, Del., 310° true radial and the SW course of the Philadelphia, Pa. radio range station, excluding the portion which overlaps the Aberdeen Danger Area (D-54). From the point of intsxn of the Philadelphia, Pa. International Arpt ILS 256° true lclzr course and the West Chester, Pa. omnirng 170° true radial via the Philadelphia Intn'l Arpt ILS lclzr to the Colts Neck, N. J. omnirng station via the Colts Neck omnirng 242° true radial."

(8) VOR civil airway No. 160 (Denver, Colo. to Sidney, Nebr.) is added to read: "From the Denver, Colo. omnirng station to the Sidney, Nebr. omnirng station."

(9) VOR civil airway No. 162 (Harrisburg, Pa. to Reading, Pa.) is added to read: "From the Harrisburg, Pa. omnirng station to the point of intsxn of the Harrisburg omnirng 086° true and the Allentown, Pa. omnirng 228° true radials."

CONTROL AREAS

(1) Amber civil airway No. 2 (Long Beach, Calif. to Umiat, Alaska) is amended by changing last portion to read: "From the intsxn of the NW course of the Snag, Yukon Territory, Canada, radio range and the U. S. Canadian Border to a line extended at right angles through a point 25 miles N of the Bettles, Alaska, radio range station."

(2) Red civil airway No. 9 is amended by changing caption to read: "(San Diego, Calif. to Casa Grande, Ariz.)"

(3) Red civil airway No. 51 (Erie, Pa. to Elmira, N. Y.) is revoked.

(10) Blue civil airway No. 54 is amended by changing caption to read: "(Evergreen, Calif. to Hamilton AFB, Calif.)"

(11) Blue civil airway No. 79 (Petersburg, Alaska to U. S.-Canadian Border) is added to read: "All of Blue civil airway No. 79."

(12) VOR civil airway No. 96 (Lafayette, Ind. to Toledo, Ohio) is amended to read: "All of VOR civil airway No. 96."

(13) VOR civil airway No. 108 (Charleston, W. Va. to Richmond, Va.) is added to read: "All of VOR civil airway No. 108."

(14) VOR civil airway No. 128 (Charleston, W. Va. to Raleigh, N. C.) is amended to read: "All of VOR civil airway No. 128."

(15) VOR civil airway No. 140 (Nashville, Tenn. to New York, N. Y.) is amended to read: "All of VOR civil airway No. 140."

(16) VOR civil airway No. 160 (Denver, Colo. to Sidney, Nebr.) is added to read: "All of VOR civil airway No. 160."

(17) VOR civil airway No. 162 (Harrisburg, Pa. to Reading, Pa.) is added to read: "All of VOR civil airway No. 162."

CONTROL AREA EXTENSIONS

(1) (Sitka, Alaska) is added to read: "Within 5 miles either side of the SW course of the Sitka, Alaska radio range extending from the radio range station to a point 25 miles SW."

(2) (Key West, Fla.) is revoked.

(3) (Big Spring, Texas) is added to read: "That airspace within a 37 mile radius of the Big Spring radio range station."

(4) (Vero Beach, Fla.) is amended to read: "That airspace within tangent lines drawn from the circumference of a circle 5 miles in radius centered on the Vero Beach omnirng station to a circle 10 miles in radius centered on the intsxn of the E course of the Melbourne, Fla. radio range and the center of control area extension No. 1150, excluding that portion below 5000 feet except that airspace which lies within existing control area or control area extension." (Note: Prior ATC approval required before entering warning areas.)

(5) (San Angelo, Texas) is added to read: "That airspace within a 30 mile radius of the San Angelo, Texas radio range station lying in the SE and NE quadrants of the radio range including that airspace lying in the NW quadrant of the radio range extending from the N course of the radio range westward to VOR civil airway No. 76N."

(6) (West Palm Beach, Fla.) is added to read: "Within 5 miles either side of the 36° true radial of the West Palm Beach omnirng extending from the omnirng station to a point 100 miles NE, thence northwestward within 5 miles either side of the 127° true radial of the Daytona Beach, Fla. omnirng to its intersection with the centerline of Control area extension No. 1150, excluding the portion below 2000 feet which lies outside the continental limits of the United States."

(7) (Midland, Texas) is amended to read: "That airspace within a 25 mile radius of the Midland radio range station; that airspace within 5 miles either side of the Midland ILS lclzr SW course extending from the lclzr to lat. 31-30-00, and that airspace between the Midland, Texas and El Paso, Texas radio range stations bounded on the north by Green 5 and on the SW, south and SE by VOR civil airway No. 66."

(8) (White Sulphur Springs, W. Va.) is added to read: "That airspace within 5 miles either side of lines bearing 227° true and 47° true from the Greenbrier Arpt extending from Red civil airway No. 37 on the SW to a point 10 miles NE of the arpt."

(9) (Richmond, Va.) is added to read: "That airspace W of Richmond bounded on the S by Red civil airway No. 77, on the NW by Red civil airway No. 45 and on the NE by Red civil airway No. 33."

(10) (Lansing, Mich.) is amended by adding the following to present control area extension: "and within 5 miles either side of the NW course of the Lansing radio range extending from the radio range station to Blue civil airway No. 42."

(11) (Oklahoma City, Okla.) is amended by changing last portion to read: "and the airspace NE of Oklahoma City bounded on the SE by VOR civil airway No. 14N, on the W by Blue civil airway No. 5, and on the N and NE by an arc having a 40 mile radius centered on the Tinker AFB, Okla. radio range station."

(12) (Fort Worth, Texas) is amended by adding the following to present control area extension: "and all that airspace between Fort Worth, Texas, Wichita Falls, Texas and Oklahoma City, Okla. bounded on the E by Amber civil airway No. 4, on the W by Blue civil airway No. 6, and on the S by VOR civil airway No. 114N."

(13) (Joplin, Mo.) is amended to read: "That airspace within a 25 mile radius of a point centered at a point at lat. 37-14-48, long. 94-29-42, excluding the portion which overlaps the Olathe Caution Area C-198."

(14) (Tampa, Fla.) is amended by changing last portion to read: "on the W by direct lines extending from the Fort Myers, Fla. radio range station to the Tampa, Fla. omnirng station thence to the point of beginning."

(15) (Juneau, Alaska) is amended by adding the following portion to present control area extension: "and the airspace within 5 miles either side of direct lines extending from point at lat. 58-21-30, long. 134-52-40 to the Point Retreat, Alaska, marine non-directional radio beacon (located at lat. 58-24-42, long. 134-57-12), thence to the Haines, Alaska, non-directional radio beacon."

CONTROL ZONES:

(1) Joplin, Mo. is amended to read: "Within a 5 mile radius of Joplin Mun. Arpt and within 2 miles either side of a line bearing 318° true extending from the arpt to a point 10 miles NW of the Joplin ILS outer marker."

(2) Wichita, Kansas is amended to read: "Within a 5 mile radius of the Wichita Mun. Arpt, within 2 miles either side of a 200° true bearing from the Wichita ILS outer Compass lctr extending to a point 10 miles S of the outer compass lctr, within a 5 mile radius of the Wichita AFB, within 2 miles either side of a 192° true bearing through the Wichita AFB non-directional radio beacon extending from the AFB control zone to a point 10 miles S of the non-directional radio beacon, and within 2 miles either side of the N course of the Wichita radio range extending from the radio range to the Kechi FM." (Note: The Wichita Mun. outer compass lctr is lctd at lat. 37-34-53, long. 97-27-28, and the AFB MHW is lctd at lat. 37-32.5N, long. 97-17.6W). (Portion to Kechi FM will be revoked with FM decommissioned.)

(3) Flint, Mich. is amended to read: "Within a 5 mile radius of Bishop Arpt and within 2 miles either side of a line bearing 268° true from the arpt extending from the arpt to a point 10 miles W of the Flint ILS outer mrkr."

(4) Wilmington, N. C. is amended to read: "Within a 5 mile radius of the New Hanover Co. Arpt, within 2 miles either side of the SW and NE courses of the Wilmington VHF VAR radio range extending from the arpt control zone to a point 10 miles NE of the VHF VAR radio range station, and within 2 miles either side of a line bearing 337° true from the Wilmington non-directional radio beacon extending to a point 10 miles W, excluding the airspace above 11,000 feet MSL during the hours of darkness which lies over Cherry Point danger area (D-125)."

(5) Oklahoma City, Okla. is amended by changing last portion to read: "and within 2-1/2 miles either side of the S and N courses of the Tinker AFB radio range extending from the Air Force Base to a point 2-1/2 miles N of the Spencer fan marker."

(6) Myrtle Beach, S. C. is amended by adding the following portion to present control zone: "and within 2 miles either side of a line bearing 198° true extending from the Myrtle Beach non-directional radio beacon to a point 10 miles SW."

(7) New Bern, N. C. is amended to read: "Within a 6 mile radius of Simmons-Nott Arpt and within 2 miles either side of a line bearing 265° true extending from the New Bern non-directional radio beacon to a point 10 miles W, excluding the portion which overlaps Cherry Point danger area (D-123) and excluding the airspace above 11,000 feet MSL during the hours of darkness which lies over Cherry Point danger area (D-125)."

REPORTING POINTS

(1) Amber civil airway No. 8 (Los Angeles, Calif. to The Dalles, Oregon) is amended by changing the reporting point which reads: "the intsxn of the NW course of the Santa Barbara, Calif. radio range and the SE course of the Salinas, Calif. radio range;" to read: "the intsxn of the NW course of the Santa Barbara, Calif. radio range and the SW course of the Fresno, Calif. radio range;" and by deleting the following reporting points: "Salinas, Calif. radio range station; the intsxn of the NW course of the Salinas, Calif. radio range and the SW course of the San Francisco, Calif. radio range;"

(2) Red civil airway No. 9 is amended by changing caption to read: "(San Diego, Calif. to Casa Grande, Ariz.)."

(3) Red civil airway No. 11 (Enid, Okla. to Boston, Mass.) is amended by deleting the following reporting point: "The intsxn of the S course of the Joplin, Mo. radio range and the NE course of the Tulsa, Okla. radio range;" and by adding the following reporting point before the Elmira, N. Y. radio range station: "Bradford, Pa. non-directional radio beacon;"

(4) Red civil airway No. 91 (Dunkirk, N. Y. to Syracuse, N. Y.) is added to read: "No reporting point designation."

(5) Blue civil airway No. 7 (Hollister, Calif. to Williams, Calif.) is amended to read: "No reporting point designation." (Note: This cancels Hollister intersection as a reporting point intersection NE Salinas and SE Oakland ranges.)

(6) Blue civil airway No. 24 (El Centro, Calif. to Daggett, Calif.) is amended to read: "The intsxn of the SE course of the Daggett, Calif. radio range and the E course of the Riverside, Calif. radio range." (Note: This deletes Thermal, Calif. range as reporting point.)

(7) Blue civil airway No. 79 (Petersburg, Alaska to U. S. Canadian Border) is added to read: "The intsxn of the NE course of the Sitka, Alaska radio range and the NW course of the Petersburg, Alaska radio range." (Thane intersection).

Domestic VOR Reporting Points are amended by adding the following reporting points: Anderson, S. C. omnirng station; Anniston, Ala. omnirng station; Atlanta, Ga. omnirng station; Birmingham, Ala. omnirng station; Chattanooga, Tenn. omnirng station; Crossville,

Tenn., omnirng station; Dyersburg, Tenn. omnirng station; Graham, Tenn. omnirng station; Knoxville, Tenn. omnirng station; LaGrange, Ga. omnirng station; Lakeland, Fla. omnirng station; Little Rock, Ark. omnirng station; Montgomery, Ala. omnirng station; Myrtle Beach, S. C. omnirng station; Orlando, Fla. omnirng station; Tri-City, Tenn. omnirng station.

CHANGE IN ATC HOLDING CLEARANCE PHRASEOLOGY: Effective July 1, 1954, ATC will no longer use the term "nonstandard pattern" when issuing holding instructions to IFR flights. The Standard elliptical holding pattern, as described in the Flight Information Manual, is made up of right-turns and is two minutes long. Any holding pattern becomes a nonstandard pattern if either or both of these two components are different. Clearances for holding in non-standard patterns will contain a brief description of the nonstandard feature/s of the pattern. Absence of instructions regarding the direction of turns will mean that right-turns should be flown. Absence of instructions regarding the length of the pattern will mean that a two-minute pattern should be flown.

A clearance for holding in a right-turn, one-minute pattern will only contain the length of pattern, i.e., "ONE MINUTE PATTERN".

A clearance for holding in a left-turn, two-minute pattern will only contain the direction of turns, i.e., "LEFT-TURNS".

A clearance for holding in a left-turn, one-minute pattern will contain both the direction of turns and length of pattern, i.e., "LEFT-TURNS, ONE-MINUTE PATTERN".

ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established, cancelled or redesignated, as indicated:

DESIGNATIONS:

(1) GREEN RIVER INTERSECTION (VHF) - intersection of the 047° magnetic radial of the Fort Bridger, Wyo. VOR and the 268° magnetic radial of the Rock Springs, Wyo. VOR.

(2) ARDMORE INTERSECTION - intersection Philadelphia LFR north course with West Chester, Pa. VOR 082° magnetic radial.

(3) FOWLER INTERSECTION - intersection Youngstown ILS northwest course with Youngstown LFR west course. (VOR) intersection Youngstown 268° magnetic radial with Youngstown ILS northwest course.

(4) MISSION INTERSECTION - intersection Gordonsville VOR direct radial to Elkins VOR with Montebello VOR direct radial to Herndon VOR.

(5) KEYSVILLE INTERSECTION - intersection Lawrenceville VOR 305° magnetic radial with Blackstone, Va. LFR SW course.

(6) CLEVES INTERSECTION - intersection Cincinnati ILS north course with 092° magnetic bearing to Cincinnati LFR station.

(7) BRIDGETOWN INTERSECTION - intersection Cincinnati VOR 022° magnetic radial with 092° magnetic bearing to Cincinnati LFR station.

(8) IRWIN INTERSECTION - intersection Columbus VOR 283° magnetic radial with 225° magnetic bearing to Springfield, Ohio "H" facility.

(9) SPRINGFIELD INTERSECTION - intersection Herndon VOR direct radial to the Springfield, Va. "H" facility with Washington TVOR direct radial to the Springfield "H" facility.

(10) SYDNEY INTERSECTION - intersection Syracuse VOR 160° magnetic radial with Binghamton VOR en route radial on V72 to Albany VOR.

(11) HANCOCK INTERSECTION - intersection Wilkes-Barre-Scranton VOR 030° magnetic radial with Binghamton VOR en route radial on V34 to Spring Glen intersection.

(12) TRIANGLE, IND. INTERSECTION - intersection of the SE course of the Chicago (Midway) ILS and the Chicago Heights 102° mangetic radial (Victor 38).

(13) HEBRON, IND. INTERSECTION - intersection of the SE course of the Chicago (Midway) ILS and the Chicago Heights 117° magnetic radial (Victor 38 South).

(14) FORESTBURG VHF INTERSECTION - intersection 346° magnetic radial Ft. Worth and 196° magnetic radial Ardmore, Okla. (Intersection Victor airways 17 and 117).

REDESIGNATIONS:

(15) RODNA INTERSECTION (VHF) - intersection of the 184° magnetic radial of the Spokane, Wash. VOR and a 276° magnetic bearing from the Pine City, Wash. MHW facility.

(16) ROCKVILLE INTERSECTION - intersection Gordonsville VOR 133° magnetic radial with Flat Rock VOR direct radial to Quantico, Va. LFR station.

(17) DE SOTO INTERSECTION - intersection of the southwest course of the Kansas City LF range and the north course of the Olathe, Kansas LF range.

(18) WINGFOOT INTERSECTION - intersection Akron, Ohio LFR SE course with Akron-Canton ILS north course. (This formerly Lakemore Intersection).

(19) OKEMAH VHF INTERSECTION - intersection of the Oklahoma City 090° magnetic radial and Tulsa 198° magnetic radials. (Intersection Victor Airways 15 and 14S).

CANCELLATIONS:

(20) ST. JO VHF INTERSECTION - intersection Ardmore 196° magnetic radial and Ft. Worth 354° magnetic radials.

(21) CAMERON INTERSECTION - intersection south course Des Moines and east course St. Joseph.

(22) BAIR INTERSECTION - intersection north course Kansas City ILS and east course St. Joseph.

(23) WELLINGTON INTERSECTION - intersection of the 74° magnetic radial of the Anthony, Kansas (VOR) and the 181° magnetic radial of Wichita, Kansas VOR.

NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established:

(1) MAYFIELD INTERSECTION - direction from holding point - SE; direction of turn - LEFT on west side of 317° magnetic radial Ponca City VOR; time - two minutes. Minimum altitude 2500' MSL.

(2) HERNDON VOR - direction from holding point - NE; direction of turn - RIGHT on NW side of Herndon 052° radial; time - 1 minute. Minimum altitude 2500'.

(3) DONCASTER INTERSECTION - direction from holding point - S; direction of turn - RIGHT on E side of the SW course Washington range; time - 1 minute. Minimum altitude 1500'.

(4) INGLESIDE INTERSECTION - direction from holding point - W; direction of turn - LEFT on N side Baltimore 107° magnetic radial; time - 2 minutes. Minimum altitude 1500'.

(5) LOCUST GROVE INTERSECTION - direction from holding point - NE; direction of turn - RIGHT on NW side of Gordonsville 062° magnetic radial; time - 1 minute. Minimum altitude 3000'.

DANGER AREA DESIGNATIONS: The following Danger Area Amendment shall be effective as dated unless otherwise advised:

AMENDMENT NO. 81 TO PART 608 - DANGER AREAS

(June 25, 1954)

(1) In Section 608.18, the Avon Park, Florida, area (D-167), published on July 16, 1949, in 14 F. R. 4287, and amended on February 9, 1950, in 15 F. R. 705, is further amended by changing the "Time of Designation" column to read: "Continuous".

(2) In Section 608.30, the Little Sable, Michigan, area (D-437), published on April 14, 1953, in 17 F. R. 2077, and amended on Jan. 16, 1954, in 19 F. R. 292, is further amended by changing the "Time of Designation" column to read: "Daylight hours only, indefinitely."

AIR ROUTE TRAFFIC CONTROL BOUNDARY AND FLIGHT ADVISORY AREA BOUNDARY AMENDMENTS: The following amendments are effective immediately:

(1) The CINCINNATI-MEMPHIS CONTROL BOUNDARIES are located as follows: 50 miles NE of Nashville, Tenn. VOR on VOR civil airway No. 140; 50 miles SE of Evansville, Ind. VOR on VOR civil airway No. 7; 50 miles northeast of Paducah, Ky. VOR on VOR civil airway No. 11.

(2) The CINCINNATI-MEMPHIS FLIGHT ADVISORY AREA BOUNDARY is as follows: Beginning at 36-15N, 85-45W thence north to a point 50 miles NE of Nashville, Tenn. VOR on VOR civil airway No. 140, thence north to a point 25 miles NE of Bowling Green, Ky. on Amber civil airway No. 6, thence west to a point 50 miles southeast of Evansville, Ind. VOR on VOR civil airway No. 7, thence NW to a point 50 miles NE of Paducah, Ky. VOR on VOR civil airway No. 11, thence NW to a point 37-30N, 89-00W.

AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month, making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

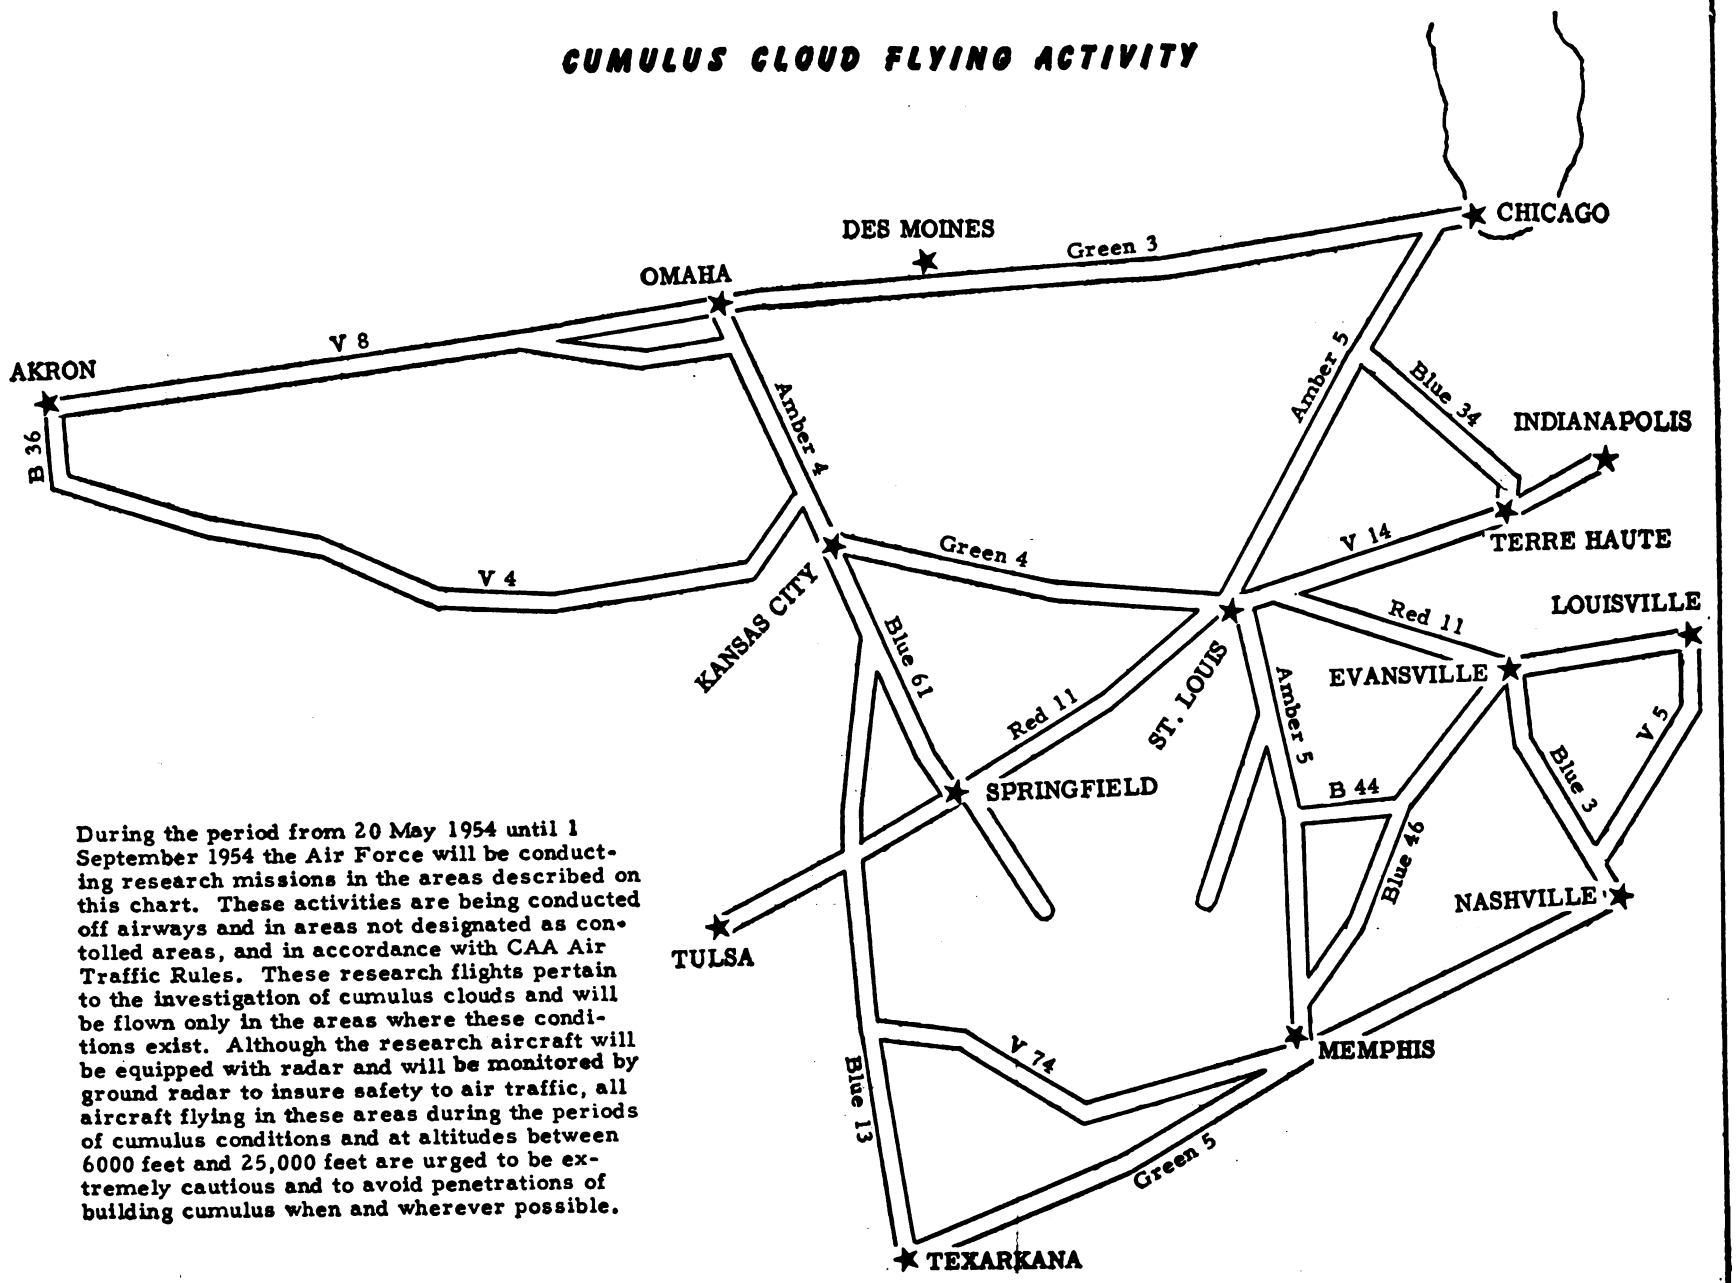
CUMULUS CLOUD FLYING ACTIVITY



During the period from 20 May 1954 until 1 September 1954 the Air Force will be conducting research missions in the areas described on this chart. These activities are being conducted off airways and in areas not designated as controlled areas, and in accordance with CAA Air Traffic Rules. These research flights pertain to the investigation of cumulus clouds and will be flown only in the areas where these conditions exist. Although the research aircraft will be equipped with radar and will be monitored by ground radar to insure safety to air traffic, all aircraft flying in these areas during the periods of cumulus conditions and at altitudes between 6000 feet and 25,000 feet are urged to be extremely cautious and to avoid penetrations of building cumulus when and wherever possible.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention: W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.1 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current Notams for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerour air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification: e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 88 of Airguide, Vol. 9, No. 1 (March 23, 1954).

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

"Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

"Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

"The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

PILOTS WARNED OF MAINTENANCE IN PROGRESS AT NAVAIDS: After June 14, during routine or emergency maintenance periods, which have been advertised in the usual manner, identification will be removed from certain Federal Airways System Navaids, namely, ILS localizers, VHF ranges (VOR, TVOR & VAR), and L/MF ranges. This new policy relative to signaling pilots that maintenance work is in progress at these Navaids was set forth in Federal Airways All Regional Letter No. 268, dated May 14, 1954, entitled "Removal of Identification During Maintenance Periods." The removal of identification serves as an additional warning to pilots that the facility has been officially taken over by "Maintenance" for tune-up or repair and may be unreliable even though on the air intermittently or constantly. This procedure is not to be considered in any way as a substitution for the official NOTAM covering "maintenance shutdown" but instead, is an adjunct to same as outlined above.

The printing of this publication has been approved by the Director of the Bureau of the Budget, April 8, 1953

VOR RECEIVER CHECK SIGNALS: Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator (FPDI) centered the omnibearing selector should read 0° with the to-from indication being "From" or the omnibearing selector should read 180° with the to-from indication reading "To". Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchel which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ±4° be indicated through use of the ground check or ±6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. Caution, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of June 28, 1954, check points or facilities have been established at the following airports (listed under city name):

CHANGE IN ATC HOLDING CLEARANCE PHRASEOLOGY: Effective July 1, 1954, ATC will no longer use the term "nonstandard pattern" when issuing holding instructions to IFR flights. The standard elliptical holding pattern, as described in the Flight Information Manual, is made up of right-turns and is two minutes long. Any holding pattern becomes a nonstandard pattern if either or both of these two components are different. Clearances for holding in nonstandard patterns will contain a brief description of the nonstandard feature/s of the pattern. Absence of instructions regarding the direction of turns will mean that right-turns should be flown. Absence of instructions regarding the length of the pattern will mean that a two-minute pattern should be flown.

A clearance for holding in a right-turn, one-minute pattern will only contain the length of pattern, i.e., "ONE-MINUTE PATTERN".

A clearance for holding in a left-turn, two-minute pattern will only contain the direction of turns, i. e., "LEFT-TURNS".

A clearance for holding in a left-turn, one-minute pattern will contain both the direction of turns and length of pattern, i. e., "LEFT-TURNS, ONE-MINUTE PATTERN".

✓ CORRECTION TO AIRMAN'S GUIDE: Correct Airman's Guide, Volume 9, No. 6, dated June 6, 1954 as follows: Page 6, item 19. Delete Crawford Intersection.

Correct Airman's Guide, Volume 9, No. 7, dated June 15, 1954 as follows:

(1) Page 75. Item 11a - change caption to read "Red 105 Wichita to Neosho" and airway to read: "via Chanute, Kans. radio range station to intersection east course Chanute and a 344° true bearing from Neosho, Mo. VOR". Item 20 - Blue 62 to read: "From Detroit, Mich. radio range station via Flint, Mich. LOM, Saginaw, Mich. Rbn, Gladwin, Mich. Rbn to Traverse City radio range station."

(2) Page 76. Item 7 under Control Area - change heading to Red 105 Wichita to Neosho. Under Control Area Extensions - item 13 - change Joplin, Mo. extension to read: "That airspace within a 25 mile radius of the Joplin Airport." Under Control Zones, item 2 - add additional portion to Wichita Control Zone to read: "and within 2 miles either side of the 360° true radial of the Wichita VOR extending from the VOR to a point 10 miles north."

(3) Page 77. Delete Lakeland, Fla. omnirange as compulsory reporting point. No voice.

✓ AIR ROUTE TRAFFIC CONTROL BOUNDARY AND FLIGHT ADVISORY AREA BOUNDARY AMENDMENTS: **Effective immediately unless otherwise shown.**

(1) NEW YORK - WASHINGTON - on VOR 140 from Baltimore to Port Deposit Intersection should be at the same geographical location as currently published on U. S. VOR RF-35, dated April 7, 1954.

(2) WASHINGTON - CINCINNATI - establish control boundary on the new airway between the Montebello, Va. VOR and Paynesville, W. Va. as 65 miles northeast of the Paynesville "HH" facility. Revise and establish control boundary on Red 37 as 55 miles northwest of

the Roanoke, Va. LFR station.

(3) CLEVELAND - CINCINNATI - Starting at a point on the northwest edge of Victor 14, 42 miles southwest of the Findlay, Ohio VOR station extending across Victor 14; thence to a point on the west edge of Victor 47W 38 miles southwest of the Findlay VOR station; thence east across Victor 47W and Victor 47 to a point on the northwest edge of Victor 88 north 28 miles southeast of the Findlay VOR station; thence east across Victor 88N, V38 and V88 to a point on the southeast edge of Victor 88 25 miles southwest of the Mansfield VOR station; thence across Victor 5 to a point on the southeast edge of Victor 5 25 miles south of the Mansfield VOR station; thence to a point on the southwest edge of Victor 133 18 miles SE of the Mansfield VOR station; thence along the southwest edge of Victor 133 to intersection with the southeast edge of Victor 43 (approximately 32 miles southeast of Mansfield VOR station); thence along the southeast edge of Victor 43 to intersection with the northeast edge of Victor 133 (approximately 32 miles southeast of Mansfield VOR station); thence to the present boundary on Blue 81 which remains as is.

(4) BOSTON - CLEVELAND - relocate on the new low frequency airway between Dansville and Syracuse to 25 miles southwest of the Syracuse LFR station.

(5) CLEVELAND - NEW YORK - relocate boundary on Victor 34 to the northwest edge of Victor 35 - Victor 31 (5 miles northwest of Trumansburg Intersection).

(6) Effective July 6 the MIAMI - JACKSONVILLE control area boundaries are located as follows: 18 miles N of Melbourne on Amber civil airway No. 7; 56 miles south of Daytona Beach VOR on VOR civil airway No. 3; at 30-00N latitude on control area 1150. Concurrently the Miami Flight Advisory Area Boundary will be changed as follows: From the junction of the New Orleans Oceanic Control Area at 26-30N to 15 miles south of Sanibel Intersection to 25 miles SE of Fort Myers to 25 miles SE of Labelle Intersection thence following the eastern boundary of the Tampa Ctl Area, northward to the Southern boundary of the Orlando Ctl Area; thence easterly along this boundary to the W boundary of Blue 19 civil arwy, thence northerly along the W bndry of Blue 19 civil arwy extended to 18 mi N of Melbourne; thence along the E boundary of Amber 7 civil arwy to 28-30N; thence easterly to the W boundary of Control area 1150; thence northerly to 30-00N; thence easterly to the western boundary of the Miami Oceanic Control Area. Remainder of Miami Flight Advisory area remains unchanged.

✓AERONAUTICAL CHART CORRECTION: Correct AL 365 RNG chart, dated May 14, 1954 at Salt Lake City, Utah by changing minimum altitude (25 mile) in northwest quadrant from 3500' to 9500'.

✓CIVIL AIRWAY, CONTROL AREA, CONTROL AREA EXTENSION, CONTROL ZONE, and REPORTING POINT AMENDMENTS: Unless otherwise advised, the civil airway, control area, control area extension, control zone and reporting point alternations designated hereinafter are adopted to become effective 0001 EST July 20, 1954. However, in order to establish and realign the navigational facilities associated with such designations with a minimum of inconvenience to air traffic, it may be necessary to prescribe temporary designations during such period in the current Notices to Airmen. Therefore, beginning July 6, 1954, and until the effective date specified above, any person operating an aircraft along or near the controlled airspace affected by these alterations shall consult the current Notices to Airmen, available at all CAA communications stations, to determine whether any temporary designations are specified therein and comply with the applicable air traffic rules.

CIVIL AIRWAYS: (1) Green civil airway No. 4 (Los Angeles, Calif. to Philadelphia, Pa.) is corrected by changing name of facility "Acomita, N. Mex. radio range station;" to read: "Grants, N. Mex. radio range station;"

(2) Red civil airway No. 1 is amended by changing caption to read: "(Portland, Oregon to Denver, Colo.)" and by deleting the last portion which reads: "From the Denver, Colo. rdo rng stn to the Goodland, Kans. non-directional rdo bcn excluding the portion which overlaps danger areas." (Note: due to decommissioning Goodland H 7/20/54).

(3) Blue civil airway No. 36 (Thurman, Colo. to Kimball, Nebr.) is amended by changing name of facility at Goodland, Kans. from "nondirectional radio beacon" to read: "Goodland, Kans. omnirange station".

(4) VOR civil airway No. 117 (Waco, Texas to Oklahoma City, Okla.) is revoked. (Note: redesignate as VOR 163, due to confusion with VOR 17).

(5) VOR civil airway No. 163 (Waco, Texas to Oklahoma City, Okla.) is added to read: "From the Waco, Texas omnirange station via the Mineral Wells, Texas omnirange station; Ardmore, Okla. omnirange station; intersection of the Ardmore omnirange 350° true and the Oklahoma City omnirange 137° true radials to the Oklahoma City, Okla. omnirng station, including an east alternate from the Ardmore omnirange station to the Oklahoma City omnirange station via the intersection of the Ardmore omnirange 011° true and the Oklahoma City omnirange 120° true radials."

CONTROL AREAS: (1) Red civil airway No. 1 is amended by changing the caption to read: "(Portland, Oregon to Denver, Colo.)"

(2) VOR civil airway No. 117 (Waco, Texas to Oklahoma City, Okla.) is revoked.

(3) VOR Civil airway No. 163 (Waco, Texas to Oklahoma City, Okla.) is added to read: "All of VOR civil airway No. 163 including an east alternate."

CONTROL AREA EXTENSIONS: (1) (Greenville, S. C.) (Greenville-Charlotte-Greensboro area) is amended by correcting last portion to read: "thence clockwise along the arc of a 30 mile radius circle centered on the Spartanburg, S. C. radio range to the northwest edge of Green civil airway No. 6, thence along the northwest edge of Green civil airway No. 6 to the arc of a 35 mile radius circle centered between the Winston-Salem and Greensboro, N. C. radio ranges at latitude 36°06'00", long. 80°01'30", thence clockwise along the arc of this 35 mile radius circle to the point of beginning."

(2) (Great Falls, Mont.) is amended to read: "That airspace within a 25 mile radius of the Great Falls omnirange station extending from the southern boundary of VOR civil airway No. 120 clockwise to the southeastern boundary of Amber civil airway No. 2, and the airspace within 5 miles either side of the northeast course of the Great Falls radio range extending from the radio range station to a point 30 miles northeast."

(3) (Portland, Oregon) is amended to read: "That airspace within a 30 mile radius of the Portland International Airport."

(4) (Seattle, Wash.) is amended to read: "That airspace within a 30 mile radius of the Seattle-Tacoma Intn'l Airport including the airspace southwest of Seattle bounded on the north and west by Blue civil airway No. 71, and on the east by Amber civil airway No. 1, excluding the portions which overlap Fort Lewis danger area (D-244) and Hood Canal caution area (C-243), and including the airspace southsouthwest of Seattle bounded on the east by Blue civil airway No. 71, on the south by lat. 46°35'00" and on the west by long. 123°03'00"."

(5) (Thermal, Calif.) is amended by changing name of facility "Thermal, Calif. radio range station" to read "Thermal, Calif. omnirange station" whereever it appears.

(6) (Monterey, Calif.) is amended by changing the words "VOR civil airway No. 27W" to read: "VOR civil airway No. 27" wherever they appear.

(7) (Colorado Springs, Colo.) is added to read: "That airspace lying east of Amber civil airway No. 3 within a 25 mile radius of Peterson Municipal Airport, Colorado Springs, Colo."

(8) (Twin Falls, Idaho) is added to read: "Within 5 miles either side of the 278° true radial of theTwin Falls omnirng extending from the omnirng station to a point 15 miles west."

(9) (Redmond, Oregon) is added to read: "Within 5 miles either side of the northwest course of the Redmond radio range extending from the radio range station to a point 17 miles northwest."

(10) (Miami, Fla. #1232) is amended to read: "An area bounded by a line on the eastern edge of Amber civil airway No. 7 at lat. 26°45'20", thence due east to the western boundary of the Nassau Oceanic Control Area, thence southerly along this boundary to lat. 24°40'00", long. 79°00'00", thence southwesterly to lat. 24°00'00", long. 80°25'00", thence due north to its intersection with the eastern edge of Amber civil airway No. 7, thence along the eastern edge of Amber civil airway No. 7 to lat. 26°45'20" point of beginning, excluding the portion below 1,000 feet which lies outside the continental limits of the United States and excluding the portion which overlaps relocated Warning Area (W-171)."

(11) (West Palm Beach, Fla. #1235) is revoked. (Note: the area previously included in Oceanic control area No. 1235 is now included in amended control area extension No. 1232).

CONTROL ZONES: (1) Kansas City, Mo. is amended by changing the portion which reads: "within 2 miles either side of the north course of the Kansas City radio range extending from the radio range station to the Linkville fan marker," to read: "within 2 miles either side of the north course of the Kansas City radio range extending from the radio range station to a point 10 miles north,"

(2) (Geneva, N. Y.) is added to read: "Within a 5 mile radius of Sampson Air Force Base, Geneva, N. Y., and within 2 miles either side of a line bear. 327° true extending from the Sampson AFB to a point 10 miles northwest of the Sampson AFB nondirectional radio beacon."

(3) (Great Falls, Mont.) is amended to read: "Within a 5 mile radius of Great Falls Mun. Arpt, within a 5 mile radius of Great Falls AFB, and within 2 miles either side of direct lines extending from the Great Falls ILS outer mrkr to the Great Falls Mun. Arpt and to the Great Falls AFB." (Note: ILS outer marker lctd at lat. 47°23'00", long. 111°22'00").

REPORTING POINTS: (1) Green civil airway No. 3 (San Francisco, Calif. to New York, N. Y.) is amended by deleting the following reporting point: "Donner Summit, Calif. radio range station;" (Note: The above deletes the Donner Summit H facility as a compulsory reporting point. This facility name was never changed in Federal Register and will be carried as shown above in order to delete from the Federal Register.)

(2) Green civil airway No. 4 (Los Angeles, Calif. to Philadelphia, Pa.) is amended by deleting the following reporting point: "Acomita, N. Mex. radio range station;" (Note: The above deletes the Grants, N. Mex. range from Green 4 as a compulsory reporting point. The facility name was never changed in Federal Register and will be carried as shown above in order to delete from the Federal Register).

(3) Amber civil airway No. 3 (El Paso, Texas to Great Falls, Mont.) is amended by deleting the following reporting point: "the intsxn of the north course of the Cheyenne, Wyo. radio range and the northeast course of the Laramie, Wyo. radio range;" (Diamond intersection)

(4) Red civil airway No. 1 is amended by changing caption to read: "(Portland, Oregon to Denver, Colo.)" and by deleting the following reporting point: "Goodland, Kans. non-directional radio beacon."

(5) Red civil airway No. 2 (Butte, Mont. to Rapid City, S. Dak.) is amended by deleting the following reporting point: "Butte, Mont. radio range station;"

(6) Red civil airway No. 10 (Amarillo, Texas to Charleston, S. C.) is amended by deleting the following reporting point: "the intsxn of a line bearing 144° true from the Tuscaloosa, Ala. non-directional radio beacon and the southwest course of the Birmingham, Ala. radio range;" (Taylorville intersection).

Domestic VOR reporting points are amended by adding the following reporting points:

(1) Andrews intersection - intersection of the Baltimore, Md. omnirng 196° true and the Washington, D. C. terminal omnirng 140° true radials. (2) Lakeland, Fla. omnirange station.

Delete the following:

(3) Mt. Lola Intersection - intersection of the Reno, Nev. omnirng 268° true and the Sacramento, Calif. omnirng 040° true radials.

(4) Saratoga Intersection - intersection of the Salinas, Calif. omnirng 319° true and the San Francisco, Calif. omnirng 224° true radials.

(5) Acomita, N. Mex. omnirange station; Crazy Woman, Wyo. omnirange station; Wells, Nev. omnirange station; Fortuna, Calif. omnirange station; Pocatello, Idaho omnirange station; Wendover, Utah omnirange station; Dubois, Idaho omnirange station; Fort Bridger, Wyo. omnirange station; Cherokee, Wyo. omnirange station; Hanksville, Utah omnirange station; Point Reyes, Calif. omnirange station. (Note: Acomita name changed to Grants, N. Mex.; above revokes Grants VOR as compulsory reporting point. Will be carried as above in Federal Register inasmuch as name-change never corrected in Federal Register).

√ ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are established, redesignated or cancelled as indicated:

(1) ARNO INTERSECTION (VHF) - intersection of the Wink, Texas, 223° magnetic radial and the Culberson 078° magnetic radial.

(2) MERTZON INTERSECTION (VHF) - intersection of the San Angelo, Texas 242° magnetic radial and the Big Spring, Texas 134° magnetic radial.

(3) FALLIS INTERSECTION (VHF) - intersection of the Oklahoma City 051° magnetic radial and the Ponca City 171° magnetic radial.

(4) JASON INTERSECTION (LF) - intersection of the west course of the Bowling Green and the northwest course of the Nashville low frequency ranges.

(5) MESCAL INTERSECTION (VHF) - intersection of the 108° magnetic radial of the Tucson, Ariz. VOR and the 245° magnetic radial of the Cochise, Ariz. VOR.

(6) GOLD HILL INTERSECTION (VHF) - intersection of the 215° magnetic radial of the Medford, Oregon VOR and the west course of the Medford, Oregon LF range.

(7) ABARR INTERSECTION (VHF) - intersection of the 042° magnetic radial of the Thurman, Colo. VOR and the 111° magnetic radial of the Akron, Colo. VOR.

(8) SEE BEE INTERSECTION (VHF) - intersection of the 062° magnetic radial of the Denver, Colo. VOR and a 035° bearing from the compass locator of the Denver ILS.

(9) PERRIS INTERSECTION (VHF) - intersection of the 079° magnetic radial of the Long Beach, Calif. VOR and the south course of the Riverside, Calif. LF range.

(10) FONTANA INTERSECTION (VHF) - intersection of the 120° magnetic radial of the Palmdale, Calif. VOR and the 023° magnetic radial of the Ontario, Calif. VOR.

(11) LATHROP INTERSECTION - intersection of the 124° magnetic radial of the St. Joseph, Mo. omnirange and the 027° magnetic radial of the Kansas City, Mo. omnirange.

(12) FOLKSTON INTERSECTION - intersection of Jacksonville 323° magnetic and Brunswick 225° magnetic radials.

(13) CALLAHAN INTERSECTION - intersection of Jacksonville 308° magnetic and Brunswick 202° magnetic radials.

(14) GREENVILLE INTERSECTION - intersection of Tallahassee 088° magnetic and Valdosta 232° magnetic radials.

(15) CYPRESS INTERSECTION - intersection of Miami 315° magnetic and West Palm Beach 218° magnetic radials.

(16) HAMMOCK INTERSECTION - intersection of Miami 297° magnetic and West Palm Beach 218° magnetic radials.

(17) TAYLOR INTERSECTION - intersection of Jacksonville 272° magnetic and Brunswick 225° magnetic radials.

(18) GENOA INTERSECTION - intersection of Jacksonville 272° magnetic and Cross City 013° magnetic radials.

(19) HILLIARD INTERSECTION - intersection of Jacksonville 308° magnetic and Brunswick 225° magnetic radials.

(20) BELLE GLADE INTERSECTION - intersection of Miami 336° magnetic and Vero Beach 191° magnetic radials.

(21) TAMIAMI INTERSECTION - intersection of Miami 272° magnetic and Ft. Myers 131° magnetic radials.

(22) NEW RIVER INTERSECTION - intersection of Miami 336° magnetic and West Palm Beach 218° magnetic radials.

(23) MAYFIELD INTERSECTION (VOR) - intersection of the 317° magnetic radial of the Ponca City omnirange with the Anthony, Kans. 062° magnetic radial.

(24) WILMOT INTERSECTION - intersection Mansfield, Ohio VOR 103° magnetic radial with Akron, Ohio, LFR southwest course.

(25) MOORLAND INTERSECTION - intersection Mansfield, Ohio VOR 103° magnetic radial with a bearing from the Akron, Ohio LFR station direct to Columbus, Ohio LFR station.

(26) BROADWAY INTERSECTION (VHF) - intersection of south course Lubbock, Texas lclzr (168° magnetic) and Lubbock VOR 138° magnetic radial.

(27) REID INTERSECTION - intersection of northeast course Greensboro and northwest course Raleigh LF ranges.

(28) BAYNES INTERSECTION - intersection of northwest course of Raleigh LFR and 180° magnetic bearing from Danville radiobeacon.

(29) MONCURE INTERSECTION (VHF) - intersection of Raleigh southwest lclzr course (229° magnetic) and Raleigh VOR 258° magnetic radial.

(30) BAYNES INTERSECTION (VHF) - intersection of Raleigh 312° magnetic and Danville 212° magnetic radials.

(31) MURRAY INTERSECTION (VHF) - intersection of Greensboro 125° magnetic and Raleigh 202° magnetic radials.

(32) CROSBY INTERSECTION (VHF) - intersection of northeast course Houston lclzr (035° magnetic) or Houston VOR 035° radial and Beaumont 265° magnetic radial.

(33) BRISTOL INTERSECTION (Integrated) - intersection of northeast course Tri City LFR and Tri City VOR 344° magnetic radial.

(34) RADIO INTERSECTION (VHF) - intersection of Midland, Texas NE lclzr course (043° magnetic) and the Midland VOR 120° magnetic radial.

(35) JOHNSON INTERSECTION (VHF) - intersection of Midland, Texas 102° magnetic and Big Spring, Texas 210° magnetic radials.

(36) PENWELL INTERSECTION (VHF) - intersection of Midland 223° magnetic and the Wink 095° magnetic radials.

(37) MUSTANG INTERSECTION (VHF) - intersection of Midland 356° magnetic and Big Spring 260° magnetic radials.

(38) PIPE LINE INTERSECTION (VHF) - intersection of Midland 301° magnetic and Wink 054° magnetic radials.

(39) TANK FARM INTERSECTION (VHF) - intersection of the NE course of Midland lclzr (043° magnetic) and Midland VOR 080° magnetic radial.

(40) FT. OGLETHORPE INTERSECTION (VHF) - intersection of S course of Chattanooga lclzr (195° magnetic) and the Chattanooga VOR 280° magnetic radial.

(41) SIGNAL MOUNTAIN INTERSECTION (LF) intersection of the NW course of Chattanooga LFR and the 270° magnetic bearing from North Chattanooga MHW facility.

(42) WAVERLY INTERSECTION - intersection of the W course of Memphis, Tenn. lclzr (266° magnetic) and the 020° magnetic bearing from Bruins MHW facility.

(43) CLINT INTERSECTION (VHF) - intersection of El Paso 150° magnetic and the Hudspeth 260° magnetic radials.

(44) APALONA INTERSECTION - intersection of the 165° magnetic radial of Scotland, Ind. omnirange and the 268° magnetic radial of Louisville, Ky. omnirange.

(45) BRADLEY INTERSECTION (VHF) - intersection of the Lawton, Okla. VOR 055° magnetic radial and Victor Arwy 17 (Oklahoma City 165° magnetic radial).

(46) PORT DEPOSIT INTERSECTION - intersection Baltimore VOR 052° magnetic radial with Philadelphia LFR southwest course and/or Dover, Dela. VOR radial to this intsxn.

(47) WERNERSVILLE INTERSECTION - intersection Harrisburg, Pa. VOR direct radial to Reading, Pa. ILS outer mrkr with Allentown, Pa. VOR en route radial on Victor 39 to Lancaster, Pa.

(48) HOMINY INTERSECTION - intersection Charleston, W. Va. VOR direct radial to Montebello, Va. VOR with Elkins, W. Va. VOR 215° magnetic radial.

(49) BELLONA INTERSECTION - intersection of Rochester VOR en route radial to Binghamton VOR on Victor 34 with a direct bearing from the Dansville, N. Y. MH facility to the Syracuse LFR station.

(50) ROME INTERSECTION - intersection of the 072° magnetic radial of Anthony omnirange and the 156° magnetic radial of Wichita omnirange.

(51) FLORENCE INTERSECTION - intersection of the 035° mangetic radial of Wichita omnirange and the 250° magnetic radial of Emporia omnirange.

(52) CEDAR VALE INTERSECTION - intersection of the 128° magnetic radial of the Wichita omnirng and the 045° magnetic radial of the Ponca City omnirng.

(53) ROCK INTERSECTION - intersection of the 128° magnetic radial of the Wichita omnirange and the 066° magnetic radial of the Anthony omnirange.

(54) CAMBRIDGE INTERSECTION - intersection of the 128° magnetic radial of the Wichita omnirng and the 17° mangetic radial of the Ponca City omnirange.

(55) WALTON INTERSECTION - intersection of the 360° magnetic radial of Wichita omnirng and the 068° magnetic radial of Hutchinson omnirng.

(56) MT. LOLA INTERSECTION - intersection 250° magnetic radial Reno VOR and Sacramento 022° magnetic radial.

(57) SARATOGA INTERSECTION - intersection of the 207° magnetic radial San Francisco

VOR and the 302° magnetic radial of Salinas VOR.

(58) DIAMOND INTERSECTION - intersection of the 047° magnetic radial Laramie VOR and the 333° magnetic radial of Cheyenne VOR.

(59) HOLLISTER INTERSECTION - intersection NE course Salinas LF range and SE course Oakland LF range.

(60) Crazy Woman, Wyo. VOR range; Wells, Nev. VOR range; Grants, N. Mex. LF range; Grants, N. Mex. VOR range; Fortuna, Calif. VOR range; Butte, Mont. LF range; Pocatello, Idaho VOR range; Wendover, Utah VOR range; Dubois, Idaho VOR range; Ft. Bridger, Wyo. VOR range; Cherokee, Wyo. VOR range; Hanksville, Utah VOR range; Point Reyes, Calif. VOR range.

REDESIGNATIONS:

(61) ANNESS INTERSECTION - intersection of 216° magnetic radial of Wichita omnirng and the 147° magnetic radial of the Hutchinson omnirange.

(62) WHITE WATER INTERSECTION - intersection of the 035° magnetic radial of the Wichita omnirng and the 080° magnetic radial of the Hutchinson omnirange.

(63) DE GRAFF INTERSECTION - intersection of the 051° magnetic radial of the Wichita omnirange and the 145° magnetic radial of Salina omnirange.

(64) GROVELAND INTERSECTION - intersection of the 015° magnetic radial of the Hutchinson omnirange and the 330° magnetic radial of the Wichita omnirange.

(65) BELLONA INTERSECTION - intersection of the Rochester VOR en route radial to the Binghamton VOR with an Elmira VOR direct radial. (This is in addition to intsxn listed under designations).

(66) HALLTOWN INTERSECTION (LFR) - intersection SW course of Springfield, Mo. and the East course of Chanute, Kansas.

CANCELLATIONS:

(67) ELBING INTERSECTION - intersection 068° magnetic radial Hutchinson VOR and the back course Wichita ILS localizer .

(68) SLATE INTERSECTION - intersection 072° magnetic radial Anthony VOR and the 166° magnetic radial Wichita.

(69) HALSTEAD INTERSECTION - intersection of 330 mag radial of the Wichita, Kansas VOR and 080° magnetic radial of the Hutchinson, Kansas VOR.

✓ NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established.

(1) SQUANTUM LFR - direction from holding point - SE; direction of turn - RIGHT on north side of SE crs; time - one minute.

(2) WAVERLY INTERSECTION - direction from holding point - W; direction of turn - RIGHT on S side of localizer crs; time - one minute. Min. alt. 1700'.

(3) HARRINGTON RANCH VHF - direction from holding point - W; direction of turn - LEFT on N side of El Paso 078° magnetic radial; Time - two minutes. Min. Alt. 10,000'.

✓ AERONAUTICAL CHARTS OF THE U. S. COAST AND GEODETIC SURVEY

New editions of the charts listed below will be published in about one month; making former prints obsolete for use in aviation. Orders for these particular charts should be kept to a minimum until new edition is printed.

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES:

Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RAPCON Radar Approach Control Center.
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . . Teletype
TVOR. . . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate contiquously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

(7-13-54)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach - Military Equivalent of Combined ASR and PAR Equipment. ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control Center.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below as well as in "Air Navigation Radio Aids" section under proper location.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.
Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.
Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.
Emergency: When a receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make 360 degree turns for identification. In either case, instructions will be followed at the pilot's discretion.
After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible
Civil Minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR FLIGHT ADVISORY SERVICE: This service to aircraft encountering severe weather condition may be obtained by requesting radar advisory through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar. Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY." All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason, the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation. This service will be available in the following ARTC Flight Advisory Areas: Chicago, St. Louis, Minneapolis, Kansas City, Albuquerque San Antonio, Ft. Worth, Oakland, Denver, Great Falls, Los Angeles and the Knoxville Air Defense Identification Zone.

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc. are not guarded. Other transmitting frequencies listed are guarded plus 122.5 mc and 3023.5 kc. Transmit and guard 121.5 mc all locations.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention: W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.1 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current Notams for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerous air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification: e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

✓ INTERCEPTION PATTERN FOR DAY-VISUAL IDENTIFICATION OF AIRCRAFT: The Air Defense Command advises that the "Interception Pattern for Day-Visual Identification of Aircraft", as published in the Flight Information Manual (Volume 7, Part 1, May 1953) page 101, has been modified to eliminate the initial pass ahead of the intercepted aircraft. The new procedure is graphically illustrated on page 102 of the new FIM, dated May 25, 1954.

Attention is directed to the following excerpts from the text accompanying the new pattern:

"Fighter-interceptor pilots are ordered to make every effort to prevent startling the intercepted aircraft air crews or passengers.

"Ordered intercepts are essential to the defense of the country and will continue as required. Close adherence to Part 620 of the Regulations of the Administrator by all pilots will minimize the necessity for intercepts. Deviations result in unknown or suspicious tracks on air defense radars and intercepts must be ordered for identification.

"Pilots being intercepted must hold a steady course and altitude. The intercept pattern has been developed and interceptor pilots well trained in its use to identify aircraft without creating additional hazard. Taking evasive action precludes precise following of the intercept pattern and creates a collision hazard. Also pilots are urged not to shine Aldis lamps or other lights into the interceptor cockpit at night, blinding the pilot and creating a hazard.

"The Air Defense Command will investigate all reports of apparent flagrant disregard for the safety of intercepted aircraft on the part of interceptor pilots and take appropriate disciplinary action."

PILOTS WARNED OF MAINTENANCE IN PROGRESS AT NAVAIDS: After June 14, during routine or emergency maintenance periods, which have been advertised in the usual manner, identification will be removed from certain Federal Airways System Navaids, namely, ILS localizers, VHF ranges (VOR, TVOR & VAR), and L/MF ranges. This new policy relative to signaling pilots that maintenance work is in progress at these Navaids was set forth in Federal Airways All Regional Letter No. 268, dated May 14, 1954, entitled "Removal of Identification During Maintenance Periods." The removal of identification serves as an additional warning to pilots that the facility has been officially taken over by "Maintenance" for tune-up or repair and may be unreliable even though on the air intermittently or constantly. This procedure is not to be considered in any way as a substitution for the official NOTAM covering "maintenance shutdown" but instead, is an adjunct to same as outlined above.

CHANGE IN ATC HOLDING CLEARANCE PHRASEOLOGY: Effective July 1, 1954, ATC will no longer use the term "nonstandard pattern" when issuing holding instructions to IFR flights. The standard elliptical holding pattern, as described in the Flight Information Manual, is made up of right-turns and is two minutes long. Any holding pattern becomes a nonstandard pattern if either or both of these two components are different. Clearances for holding in nonstandard patterns will contain a brief description of the nonstandard feature/s of the pattern. Absence of instructions regarding the direction of turns will mean that right-turns should be flown. Absence of instructions regarding the length of the pattern will mean that a two-minute pattern should be flown.

A clearance for holding in a right-turn, one-minute pattern will only contain the length of pattern, i.e., "ONE-MINUTE PATTERN".

A clearance for holding in a left-turn, two-minute pattern will only contain the direction of turns, i. e., "LEFT-TURNS".

A clearance for holding in a left-turn, one-minute pattern will contain both the direction of turns and length of pattern, i. e., "LEFT-TURNS, ONE-MINUTE PATTERN".

√FLIGHTS INTO REMOTE AREAS OF CANADA: Prior to planning flights into remote or sparsely settled areas of Canada, pilots are cautioned to become acquainted with the recommendations and requirements of the Canadian Department of Transport, contained in their Information Circulars 0/6/54 (Flight Precautions in Sparsely Settled Areas) and 0/8/54 (The Royal Canadian Air Force Search and Rescue Service). The information covered by these two circulars is available at all airport traffic control towers and communications stations in the United States and is also carried in the International Flight Information Manual Volume 5, dated June 1, 1954. This Manual may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., at 50 cents per copy.

√LOCATION IDENTIFIERS: The following assignments and changes affect the use of location identifiers:

FSG	Fort Snelling, Minn. (assignment)
HFL	Jacksonville, Fla., Herlong Field (assignment)
LRN	Lawrenceville, Ga., VOR (assignment)
PUB	Pueblo, Colo., Pueblo Airport #2 (change from PUO)
PUO	Pueblo, Colo., Pueblo Airport #2 (PUO deletion)
WAF	Washington, D. C., USAF Weather Central (assignment)

√MINIMUM EN ROUTE IFR ALTITUDES: Effective August 3, 1954, minimum en route IFR altitudes are amended as follows:

✓ ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are designated or redesignated as indicated:

DESIGNATIONS:

(1) GAP MILLS INTERSECTION - intersection of a direct bearing from Roanoke, Va. LFR stn to Charleston, W. Va. LFR stn with Pulaski, Va. VOR 022° magnetic radial on Red 37

(2) HEREFORD INTERSECTION - intersection Baltimore VOR en route radial to Harrisburg VOR on Victor 33 with Herndon VOR en route radial to Parkton Intersection on Victor 3.

(3) PRESTON INTERSECTION - intersection Salisbury VOR 332° magnetic radial with Dover LFR southwest course on Red 77.

(4) MONMOUTH INTERSECTION (VHF) - intersection of the 182° magnetic radial of the Newberg, Oregon VOR and a 272° mangetic bearing from the Salem, Oregon ILS outer marker

(5) HOMO INTERSECTION - intersection of the Tampa, Fla. omnirange 011° magnetic radial and the Cross City, Fla. omnirange 152° magnetic radial.

REDESIGNATIONS:

(6) BERRY INTERSECTION (VHF) - intersection of the 330° magnetic radial of the Long Beach, Calif. VOR and the 283° magnetic radial of the Ontario, Calif. VOR.

(7) WARREN INTERSECTION - intersection of the 060° magnetic radial of Detroit omnirange and the northwest course of the Windsor LF radio range.

✓ NON-STANDARD HOLDING PATTERN: Effective immediately the following non-standard holding pattern is established:

LA VERNIA RADIO BEACON - direction from holding point - SE; direction of turn - LEFT on SE course of Randolph LF range between the La Vernia radio beacon and a point two minutes SE; Time - two minutes. Min. Alt. 2000'.

VOR RECEIVER CHECK SIGNALS

Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operation of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consis- of a single radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator (FPDI) centered the omnibearing selector should read 0° with the to-from indication being "From" or the omnibearing selector should read 180° with the to-from indication reading "To". Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchell which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of + 4° be indicated through use of the ground check or + 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. CAUTION, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of July 12, 1954, check points or facilities have been established at the following airports (listed under city name).

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention: W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.1 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current Notams for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerour air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification: e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

✓ NAUTICAL MILES - STATUTE MILES: NEW DIMENSIONAL UNIT PROCEDURES: Among the various segments of the aviation industry there are many users of the airspace who desire to use nautical units for speed and distance measurements in their operations while others prefer the use of statute units. A plan designed to best serve the interests of all concerned has been developed and will be placed in effect on October 1, 1954. The plan generally provides that the pilots of all air carrier aircraft and all military aircraft shall use nautical units exclusively in all of their operations whether IFR or VFR. Private and business aircraft pilots, on the other hand, may use either nautical or statute units according to their preference.

Since uniformity is essential to the efficient operation of the Federal Airways System, all CAA facilities (communications stations, airport traffic control towers and air route traffic control centers) will use knots and nautical miles as the standard for all internal operations involving speed and distance values. Also, all normal radio transmissions of speed and distance values by these facilities will be in terms of knots and nautical miles with the exception of visibility which will continue to be reported and transmitted in statute miles. Any speed or distance value (except those associated with radar traffic control) will be converted from nautical to statute units by CAA facilities upon receipt of specific requests from pilots of private and business aircraft.

At the present time, surface wind velocity is reported in miles per hour. Beginning October 1, surface wind velocity will be reported in knots. Hence, when surface wind is reported as "west south west eight" it will be eight knots rather than eight miles per hour. This change need be of no great concern to the pilot, however, since, until a velocity of thirty miles per hour or more is reached, the difference between miles per hour and knots is so slight as to be insignificant for all practical purposes. In any case, if the pilot of a private or business aircraft wants the wind velocity in miles per hour, the CAA facility will convert it upon request.

When filing IFR flight plans and conducting IFR flight, distance and speed information submitted to CAA facilities by all pilots should, if possible, be in nautical units since the ground system will operate on the basis of nautical units. If statute units are used by the private or business aircraft pilot, they should be identified as such in each case; i.e., "airspeed 110 miles per hour". The CAA facility will then convert the value to knots for internal use.

FLIGHTS INTO REMOTE AREAS OF CANADA: Prior to planning flights into remote or sparsely settled areas of Canada, pilots are cautioned to become acquainted with the recommendations and requirements of the Canadian Department of Transport, contained in their Information Circulars 0/6/54 (Flight Precautions in Sparsely Settled Areas) and 0/8/54 (The Royal Canadian Air Force Search and Rescue Service). The information covered by these two circulars is available at all airport traffic control towers and communications stations in the United States and is also carried in the International Flight Information Manual Volume 5, dated June 1, 1954. This Manual may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., at 50 cents per copy.

✓ CIVIL AIRWAY, CONTROL AREA EXTENSION, CONTROL AREA, CONTROL ZONE, and REPORTING POINT AMENDMENTS: Effective August 17, 1954, civil airways, control area, control area extension, control zone and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Green civil airway No. 4 (Los Angeles, Calif. to Philadelphia, Pa.) is amended by deleting the following facility: "Grants, N. Mex. radio range station;"

(2) Red civil airway No. 4 is amended by changing caption to read: "(Las Vegas, N. Mex. to Tucumcari, N. Mex.)" and is further amended to read: "From the Las Vegas, N. Mex. radio range station to the intsxn of the SE course of the Las Vegas, N. Mex. radio range and the W course of the Tucumcari, N. Mex. radio range." (Note: Above change deletes portion between Albuquerque via Santa Fe to Las Vegas, N. Mex.)

(3) Blue civil airway No. 74 is amended by changing caption to read: "(Willard, N. Mex. to Otto, N. Mex.)" and is further amended to read: "From the intsxn of the south course of the Otto, N. Mex. radio range with a direct line between the Albuquerque, N. Mex. radio range station and the Roswell, N. Mex. radio range station to the Otto, N. Mex. radio range station."

(4) VOR civil airway No. 73 (Tulsa, Okla. to Salina, Kans.) is amended to read: "From the Tulsa, Okla. omnirange station via the Wichita, Kans. omnirange station; Hutchinson, Kans. omnirange station; intsxn of the Hutchinson omnirng 025° true and the Salina omnirng 184° true radials to the Salina, Kans. omnirng station."

(5) VOR civil airway No. 96 (Lafayette, Ind. to Toledo, Ohio) is amended by deleting the portion which reads: "Lafayette omnirange 079° true" and substituting the following in lieu thereof: "Lafayette omnirange 080° true."

(6) VOR civil airway No. 162 (Harrisburg, Pa. to Reading, Pa.) is added to read: "From the Harrisburg, Pa. omnirange station to the point of intersection of the Harrisburg omnirange 086° true and the Allentown, Pa. omnirange 228° true radials."

CONTROL AREAS: (1) Red civil airway No. 4 is amended by changing caption to read: "(Las Vegas, N. Mex. to Tucumcari, N. Mex.)" and is further amended to read: "All of Red civil airway No. 4."

(2) Blue civil airway No. 74 is amended by changing caption to read: "(Willard, N. Mex. to Otto, N. Mex.)" and is further amended to read: "All of Blue civil airway No. 74."

(3) VOR civil airway No. 3 (Key West, Fla. to Bangor, Me.) is amended to read: "All of VOR civil airway No. 3 including north and south alternates, but excluding that area between the main airway and its west alternate extending from the Miami, Fla. omnirange station to the Vero Beach, Fla. omnirange station."

(4) VOR civil airway No. 73 (Tulsa, Okla. to Salina, Kans.) is amended to read: "All of VOR civil airway No. 73."

(5) VOR civil airway No. 162 (Harrisburg, Pa. to Reading, Pa.) is added to read: "All of VOR civil airway No. 162."

CONTROL AREA EXTENSIONS: (1) (Acomita, N. Mex.) is revoked.

(2) (Stuttgart, Ark.) is added to read: "That airspace south of Stuttgart bounded on the north by Red civil airway No. 37, on the SE by VOR civil airway No. 11 and on the SW by Blue civil airway No. 22."

(3) (Albuquerque, N. Mex.) is amended by adding the following portion to present control area extension: "and that airspace bounded on the east by a line 5 miles east of and parallel to the north course of the Albuquerque radio range, on the northwest by VOR civil airway No. 19, and on the south by VOR civil airway No. 12."

(4) (Tulsa, Okla.) is amended to read: "That airspace within a 25 mile radius of the Tulsa radio range station; that airspace SW of Tulsa bounded on the east by VOR civil airway No. 15, on the north and northwest by Amber civil airway No. 4, and on the west by VOR civil airway No. 163; that airspace south of Tulsa bounded on the west and northwest by VOR civil airway No. 15E, on the east by a line 5 miles east of and parallel to a direct line between the Tulsa omnirange station and the Dallas, Texas omnirange station, and on the south by the Sherman, Texas control area extension."

(5) (Rochester, Minn.) is amended to read: "That airspace within a 15 mile radius of the Rochester, Minn. omnirange station."

(6) (Del Rio, Texas) is amended to read: "That airspace over United States territory within a 25 mile radius of Laughlin AFB, Del Rio, Texas excluding the portions which overlap danger areas."

CONTROL ZONES: (1) (Denver, Colo.) is amended to read: "Within a 10 mile radius of Stapleton Air Field, Denver, Colo. within 2 miles either side of the Stapleton ILS lclzr course extending from the lclzr to a point 11-1/2 miles east of Stapleton Air Field, within 2 miles either side of the 45° true radial of the Denver omnirange extending from the omnirange station to a point 5 miles NE, and within 2 miles either side of the N course of the Denver radio range extending from the radio range station to a point 13 miles north.

(2) (Wichita, Kans.) is amended by deleting the portion which reads: "within 2 miles either side of the north course of the Wichita radio range extending from the radio range station to the Kechi fan marker;"

REPORTING POINTS: (1) Red civil airway No. 4 is amended by changing caption to read "(Las Vegas , N. Mex. to Tucumcari, N. Mex.)" and is further amended to read: "No reporting point designation."

(2) Blue civil airway No. 74 is amended by changing caption to read: "(Willard, N. Mex. to Otto, N. Mex.)" and is further amended to read: "No reporting point designation."

✓ AIR ROUTE TRAFFIC CONTROL BOUNDARY AND FLIGHT ADVISORY AREA BOUNDARY AMENDMENTS: Effective August 3, 1954.

The MIAMI-TAMPA control area boundary is changed as follows: Beginning at the junction of the eastern edge of the Tampa control area with lat. 27-14N, proceeding southwestward to the junction of the western edge of control area 1228 with lat. 26-34N. Concurrently the MIAMI-TAMPA flight advisory area is changed as follows: From the junction of the eastern edge of the New Orleans OAC area with lat. 26-34N, eastward to the western edge of control area 1228 thence northeasterly to the eastern edge of the Tampa Control area at lat. 27-14N.

✓ AIRMAN'S GUIDE CORRECTION: Correct Airman's Guide, Volume 9, No. 3, dated April 20, 1954, as follows:

Page 31, item 16, under Non-Standard Holding Patterns. BALTIMORE - hold at Baltimore VOR NE (052° radial) on SE side with left turns; time - one minute, Min. alt. 2000'.

✓ ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are designated or redesignated as indicated:

DESIGNATIONS:

(1) HALSMER, IND. INTSXN - intersection of the northwest course of Indianapolis LF range and the 077° magnetic radial of Lafayette, Ind. VOR.

(2) COWAN, IND. INTSXN - intersection of the 068° magnetic radial of the Indianapolis, Ind. VOR and the 282° magnetic radial of the Dayton, Ohio VOR.

(3) STOCKWELL, IND. INTSXN - intersection of the NW course of the Cincinnati, Ohio LF range, and the NW course of the Indianapolis, Ind. LF range.

(4) PAINT ROCK INTSXN (VHF) - intersection of the Abilene, Texas 170° and the San Angelo 061° magnetic radials.

(5) FRIENDSWOOD INTSXN (LF) - intersection of the SE course of the Houston LF range and the 039° magnetic bearing from the Pearland radio beacon.

(6) CITY INTSXN (Integrated) - intersection of the NE course of the Augusta, Ga. LF range and the N course of the Augusta (Bush Field) lclzr.

(7) HICKSVILLE, OHIO INTSXN - intersection of the 108° magnetic radial from Goshen LFR and NE course Ft. Wayne LFR.

REDESIGNATION:

(8) SALTON INTSXN (VHF) - intersection of the 143° magnetic radial of the Thermal, Calif. VOR and a 218° magnetic bearing from the Hayfield Lake, Calif. RBN.

✓ DANGER AREA DESIGNATIONS: The following Danger Area Amendment shall be effective as dated unless otherwise advised:

AMENDMENT NO. 84 TO PART 608 - DANGER AREAS
(August 10, 1954)

(1) In Section 608.40, the Pine Camp, N. Y. area (D-66), published on April 21, 1949, in 14 F. R. 1918, and on July 16, 1949, in 14 F. R. 4293, is amended by changing the "Name and Location" column to read: "Camp Drum".

(2) In Section 608.40, the Gardiner's Island, N. Y. area (D-19), published on July 16, 1949, in 14 F. R. 4293, and amended on January 16, 1953 in 18 F. R. 350, is further amended by changing the "Using Agency" column to read: "NAS New York, N. Y."

(3) In Section 608.28, the Sharps Island, Md., area (D-36), published on July 16, 1949, in 14 F. R. 4292, is amended by changing the "Using Agency" column to read: "NAS Patuxent River, Md."

(4) In Section 608.54, the Quantico, Va. area (D-37) published on July 16, 1949, in 14 F. R. 4297, and amended on April 26, 1952, in 17 F. R. 3724, and on June 14, 1952 in 17 F. R. 5389, and on September 27, 1952 in 17 F. R. 8617, is further amended by changing the "Designated Altitudes" to read: "Unlimited".

(5) In Section 608.41, the Currituck Sound, N. C. area (D-30) published on April 21, 1949, in 14 F, R. 1918, is amended by changing the "Time of Designation" column to read: "Unlimited".

(6) In Section 608.41, the Currituck Sound, N. C. area (D-34) published on April 21, 1949, in 14 F. R. 1918, is amended by changing the "Time of Designation" column to read: "Unlimited."

(7) In Section 608.29, the Camp Edwards, Mass. area (D-14) published on April 21, 1949, in 14 F. R. 1916, republished on July 16, 1949, in 14 F. R. 4292, amended on Sept. 22, 1951 in 16 F. R. 9680 and redesignated as one area on April 21, 1954 in 19 F. R. 2308 is amended by changing the "Using Agency" column to read: "Department of the Army, Camp Edwards, Mass. TAC".

(8) In Section 608.27, the DeBlois, Me. area (D-397) published on Dec. 6, 1951, in 16 F. R. 12307, and amended on June 4, 1954 in 19 F. R. 3298 is further amended by changing the "Using Agency" column to read: "506th Strategic Fighter Wing, Dow AFB, Bangor, Me."

VOR RECEIVER CHECK SIGNALS

Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operations of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a signal radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator (FPDI) centered the omnibearing selector should read 0° with the to-from indication being "From" or the omnibearing selector should read 180° with the to-from indication read "To" Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchell which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. CAUTION, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of July 26, 1954 , check points or facilitites have been established at the following airports (listed under city name)

ALWAYS CHECK NOTICES TO AIRMEN SECTION

AIR NAVIGATION RADIO AIDS

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES:

Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P . . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RAPCON Radar Approach Control Center.
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . . Teletype
TVOR. . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

(8-10-54)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach - Military Equivalent of Combined ASR and PAR Equipment. ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control Center.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway The final approach flight path on a precisionscope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below as well as in "Air Navigation Radio Aids" section under proper location.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower

Emergency: When a receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make 360 degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible Civil Minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR FLIGHT ADVISORY SERVICE: This service to aircraft encountering severe weather condition may be obtained by requesting radar advisory through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar. Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY." All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason, the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation. This service will be available in the following ARTC Flight Advisory Areas: Chicago, St. Louis, Minneapolis, Kansas City, Albuquerque San Antonio, Ft. Worth, Oakland, Denver, Great Falls, Los Angeles and the Knoxville Air Defense Identification Zone.

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc. are not guarded. Other transmitting frequencies listed are guarded plus 122.5 mc and 3023.5 kc. Transmit and guard 121.5 mc all locations.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention: W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.1 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current Notams for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerour air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification: e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

NAUTICAL MILES - STATUTE MILES: NEW DIMENSIONAL UNIT PROCEDURES: Among the various segments of the aviation industry there are many users of the airspace who desire to use nautical units for speed and distance measurements in their operations while others prefer the use of statute units. A plan designed to best serve the interests of all concerned has been developed and will be placed in effect on October 1, 1954. The plan generally provides that the pilots of all air carrier aircraft and all military aircraft shall use nautical units exclusively in all of their operations whether IFR or VFR. Private and business aircraft pilots, on the other hand, may use either nautical or statute units according to their preference.

Since uniformity is essential to the efficient operation of the Federal Airways System, all CAA facilities (communications stations, airport traffic control towers and air route traffic control centers) will use knots and nautical miles as the standard for all internal operations involving speed and distance values. Also, all normal radio transmissions of speed and distance values by these facilities will be in terms of knots and nautical miles with the exception of visibility which will continue to be reported and transmitted in statute miles. Any speed or distance value (except those associated with radar traffic control) will be converted from nautical to statute units by CAA facilities upon receipt of specific requests from pilots of private and business aircraft.

At the present time, surface wind velocity is reported in miles per hour. Beginning October 1, surface wind velocity will be reported in knots. Hence, when surface wind is reported as "west south west eight" it will be eight knots rather than eight miles per hour. This change need be of no great concern to the pilot, however, since, until a velocity of thirty miles per hour or more is reached, the difference between miles per hour and knots is so slight as to be insignificant for all practical purposes. In any case, if the pilot of a private or business aircraft wants the wind velocity in miles per hour, the CAA facility will convert it upon request.

When filing IFR flight plans and conducting IFR flight, distance and speed information submitted to CAA facilities by all pilots should, if possible, be in nautical units since the ground system will operate on the basis of nautical units. If statute units are used by the private or business aircraft pilot, they should be identified as such in each case; i.e., "airspeed 110 miles per hour". The CAA facility will then convert the value to knots for internal use.

FLIGHTS INTO REMOTE AREAS OF CANADA: Prior to planning flights into remote or sparsely settled areas of Canada, pilots are cautioned to become acquainted with the recommendations and requirements of the Canadian Department of Transport, contained in their Information Circulars 0/6/54 (Flight Precautions in Sparsely Settled Areas) and 0/8/54 (The Royal Canadian Air Force Search and Rescue Service). The information covered by these two circulars is available at all airport traffic control towers and communications stations in the United States and is also carried in the International Flight Information Manual Volume 5, dated June 1, 1954. This Manual may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., at 50 cents per copy.

✓ NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established, cancelled or re-established as indicated:

ESTABLISH

(1) ELM GROVE FM - direction from holding point - SE; direction of turn - LEFT on west side of Barksdale LF range SE course; Time - one minute; minimum altitude - 1300'.

(2) UNION INTSXN - direction from holding point - S; direction of turn - RIGHT on east side of south course of Cincinnati (ILS); Time - one minute.

RE-ESTABLISH

(3) DIXIE MHW - direction from holding point - NW; direction of turn - RIGHT on west side inbound course to fix 146° magnetic; Time - one minute; minimum altitude - 1700'.

CANCELLED

(4) SHREVEPORT LF RANGE - this pattern presently shows holding to the northwest with LEFT turns.

(5) SHREVEPORT VOR RANGE - this pattern presently shows holding to the northwest with LEFT turns.

✓ ON-REQUEST REPORTING POINTS: Effective immediately the following on-request reporting points are designated or cancelled as indicated:

DESIGNATIONS

(1) DADE CITY, FLA. INTSXN - intersection 275° magnetic radial Orlando, Fla. and 046° magnetic radial Tampa, Fla.

(2) ONA INTSXN (LF) - intersection of the north course (350° magnetic) of the Ft. Myers and the southeast course of the Tampa LF ranges.

(3) FAIRBANKS INTSXN (Integrated) - intersection of the northeast course of the Richmond, Texas LF range and the Houston 305° magnetic radial.

(4) MONCURE INTSXN (Integrated) - intersection of the southeast course of the Greensboro LF radio range and the Raleigh southwest localizer course.

(5) LEWISBURG INTSXN (VHF) - intersection of the Nashville 340° magnetic and the Bowling Green 280° magnetic radials.

(6) TARPON INTSXN (VHF) - intersection of the West Palm Beach 013° magnetic and the Daytona 126° magnetic radials.

(7) SNAPPER INTSXN (VHF) - intersection of the West Palm Beach 013° magnetic and the Vero Beach 042° magnetic radials.

(8) BONITA INTSXN (VHF) - intersection of the West Palm Beach 013° magnetic and the Vero Beach 142° magnetic radials.

(9) SHARK INTSXN (VHF) - intersection of the West Palm Beach 035° magnetic and the Daytona Beach 126° magnetic radials.

(10) SNAPPER INTSXN (LF) - intersection of the north course of the West Palm Beach and the east course of the Melbourne LF ranges.

CANCEL

(11) CONWAY INTSXN (LF) - intersection of the east course of the Amarillo and the northwest course of the Clarendon LF ranges.

(12) BALSA INTSXN (LF) - intersection of the north course of the West Palm Beach and the east course of the Melbourne LF ranges. (This redesignated and named Snapper Intsxn).

✓ DANGER AREA AMENDMENTS: The following Danger Area Amendments shall be effective as dated, unless otherwise advised:

AMENDMENT NO. 85 to PART 608 - DANGER AREAS

(August 13, 1954)

(1) In Section 608.61, Cook Inlet, Alaska, area (D-466) is added to read: Location: COOK INLET (McKinley 118 Chart); Description: Beginning at lat. 60-52-00, long. 151-51-00; thence southwesterly 2 miles inland and parallel to the shoreline to a point WNW of Harriet Point, approximate lat. 60-24-00, long. 152-18-00; thence WNW 16 miles to the highest point on Mount Redoubt, approximate lat 60-29-00, long. 152-44-00; thence north 16°, east toward Mount Spurr, approximately 25 miles to approximate lat. 60-52-00, long. 152-31-00; thence E to lat. 60-52-00, long. 151-51-00, point of beginning; Altitudes: 3500 feet to unlimited; Time: Unlimited; Using Agency: Alaskan Air Command.

(2) In Section 608.61, the Cook Inlet, Alaska, area (D-347), published on April 21, 1949, in 14 F. R. 1921, is redesignated and revised to read: Location: COOK INLET (D-347) (McKinley 118 Chart); Description: Beginning at a point 2 miles inland from the W shore of Cook Inlet and 1-1/2 miles N of the light at the mouth of the Beluga River, approximate lat. 61-14-00, long. 150-55-00; thence SW 2 miles inland and parallel to the shoreline to a point WNW of Harriet Point approximate lat. 60-24-00, long. 152-18-00; thence WNW 16 miles to the highest point on Mount Redoubt, approximate lat. 60-29-00, long. 152-44-00; thence N 16° east toward Mount Spurr, approximately 46 miles to a point near the McArthur River, approximate lat. 61-07-20, long. 152-21-20; thence N 51° E 32 miles to a point near the foot of the Triumvirate Glacier, lat. 61-24-30, long. 151-37-00; thence SE to the point of beginning, excluding that portion south of latitude 60-52-00; Altitudes: Surface to unlimited; Time: Unlimited; Using Agency: Alaskan Air Command.

✓ AIR ROUTE TRAFFIC CONTROL BOUNDARIES: The following revisions are effective immediately:

(1) WASHINGTON-CINCINNATI boundaries on Victor 4N and Victor 4S as 15 miles west of Elkins, West Virginia VOR station.

(2) WASHINGTON-CINCINNATI boundary on Victor 108 as 5 miles east of Hominy intersection (Charleston, West Virginia, VOR en route radial to Montebeloo, Virginia, VOR with Elkins, West Virginia, VOR 215° magnetic radial).

✓ CHANGES IN INSTRUMENT APPROACH PROCEDURE MINIMUMS: Starting with this issue, the Airman's Guide will begin to publish some instrument approach procedures with the lowest landing and take-off minimums possible under the obstruction clearance requirements of the Regulations of the Administrator, Part 609. These minimums apply to all users except military aircraft and those for whom the Administrator has specifically authorized other minimums. Further details may be found in the note preceding the Manchester, N. H. (Grenier AFB) ADF on page 45 of this issue. However, all users are warned that the lowering of these minimums published in the Airman's Guide does not necessarily imply that obstructions have been lowered or removed.

VOR RECEIVER CHECK SIGNALS

Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operations of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a signal radial; (b) certified check points on the airport surface; or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator (FPDI) centered the omnibearing selector should read 0° with the to-from indication being "From" or the omnibearing selector should read 180° with the to-from indication read "To". Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchell which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. CAUTION, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of August 9, 1954, check points or facilitites have been established at the following airports (listed under city name).

CHARLESTON, S.C. Municipal Airport Procedure No. 1 Dated: 8/1/53	PROCEDURE CANCELLED superseded by combination ILS-ADF effective date: 8/30/54									

NOTICE: Starting with this issue, the Airman's Guide will begin to publish some instrument approach procedures with the lowest landing and take-off minimums possible under the obstruction clearance requirements of the Regulations of the Administrator, Part 609. Below is the only one contained in this issue. These minimums apply to all users except military aircraft and those for whom the Administrator has specifically authorized other minimums. ILS and GCA (PAR) straight-in landing minimums, formerly published no lower than 400-3/4, may in some instances be lowered to 200-1/2. Straight-in LFR, ADF and VOR landing minimums, formerly no lower than 500-1, may in some instances be lowered to 400-1. There are now three categories of aircraft minimums, namely those for (1) 75 mph or less- 2-engine or less, (2) more than 75 mph - 2- engine or less, and (3) more than 75 mph - more than 2 engine. All users are warned that the lowering of these minimums published in the Airman's Guide does not necessarily imply that obstructions have been lowered or removed.

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

VOL. 9, NO. 12 . . . . . AUGUST 24, 1954

The AIRMAN'S GUIDE is issued every two weeks. This issue includes all data on record as of 0001 E.S.T. on the above date. For later information consult Teletype NOTAMS.

NOTICES TO AIRMEN

SPECIAL NOTICES

✓ Indicates New or Revised Special Notices

The Airman's Guide covers primarily two broad fields of civil airport information, namely so-called permanent data changes and temporary hazardous conditions. Permanent airport data refer to new airports or changes in field layout or servicing, lighting, or permanent obstructions on existing airports. Temporary hazardous conditions refer to conditions that make such airports temporarily unusable or usable only with caution. Such hazardous conditions could be, for example, a field closed because of floods, spring thaws, or construction, or merely a burned-out obstruction light or a runway partially unusable because of construction.

Since the aeronautical public should be immediately advised of hazardous conditions, reporters should utilize the CAA Airway Communications Stations. The item to be reported, therefore, should either be telephoned or mailed to the nearest communications station for dissemination as a Notam and for further transmission to the publishers of the Airman's Guide. (If this is not feasible the items should be reported directly to the Office of Aviation Information, Attention: W-52, CAA, Washington 25, D. C.)

Permanent airport data changes (as differentiated from temporary hazardous conditions) should be reported to the appropriate CAA Regional Office for coordination before they are included in the Airman's Guide.

CIVIL USAGE OF MILITARY FIELDS: U. S. Air Force and Navy Fields are open to civil fliers only in emergency or with prior permission of the commanding officers thereof.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

VHF INSACS-TO-PRIVATE AIRCRAFT CHANNELS: The national VHF channel for transmission from INSACS-to-private aircraft, 122.1 mc was partially implemented beginning August 1, 1951. (The companion aircraft-to-INSACS frequency is 122.1 mc). Eventually all INSACS will transmit on 122.2 mc but in the meantime VHF reply to private aircraft will be furnished on the VHF range voice channel at INSACS which have not yet commissioned 122.2 mc. Pilots should consult the Airman's Guide and current Notams for information on frequencies available at specific stations. The frequency upon which the pilot expects reply should be specified in the initial call.

When an INSACS is unable to reply on the VHF range voice channel because of equipment failure or maintenance shutdown, reply will be made on 121.5 mc. A small number of INSACS have not yet installed transmitting service on 121.5 mc. At these locations, the reply on 121.5 mc will be made by an adjacent control tower. Therefore, when a pilot calling such station has reason to believe that the VHF range voice channel is not operating, he should request reply on 121.5 mc.

USE OF OMNIRANGE: The effectiveness of the omnirange (VOR) depends upon proper use and adjustment of both the ground and airborne equipment. The accuracy of course alignment of the omnirange over 360° azimuth is excellent when compared to that of the L/MF range, being generally within two degrees (plus or minus). On certain stations, some sectors may contain slightly larger errors, but no course published as usable in the Airman's Guide will be displaced more than 3-1/2 degrees from its theoretical location. Certain minor irregularities may be observed in using VOR facilities, such as apparent course roughness, infrequent brief flag alarm activity, course deflections and/or limited distance range. Pilots flying over unfamiliar routes are cautioned to be on the alert for these apparent vagaries.

DVFR FLIGHT PLANS: When an IFR flight plan is cancelled, a DVFR flight plan should be filed if the provisions of Part 620 of the Regulations of the Administrator will be applicable to any portion of the remainder of the flight.

AUTOMATIC VOICE IDENTIFICATION: Voice identification has been added to numerour air navigational facilities (omnirange stations and outer compass locators).

Omniranges and outer compass locators where voice identification is functioning are designated in the ANRA pages by an asterisk (*) in the "class identification" column. The transmission consists of a voice announcement alternating with the usual Morse Code identification: e. g. Long Beach omni (voice) .-.. --. -... (LGB in Code).

NEW AIR TRAFFIC CLEARANCE PHRASEOLOGY ADOPTED: The phrase "VIA FLIGHT PLANNED ROUTE" has been adopted for use in air traffic clearances and may be used to replace the detailed description of any portion of the route of flight that is identical to the route filed by the pilot. IFR flight plans filed by pilots must contain the complete route of flight and must be relayed to air traffic control unchanged in order for this phraseology to be successfully used.

TRANSMISSION OF "V" BY VAR RANGES: The letter "V" is transmitted by all VAR ranges. It precedes the usual location identifier and is separated from it by a short space. It is intended to enable pilots to distinguish instantly between the aural directional signals of VAR ranges, and those of low or medium frequency ranges, ILS and VORs located in the same general area. It will, for example, guard against the possibility of an error occuring through accidental connection of a pilot's headset to the wrong receiver. The "V" is transmitted at an appreciably higher rate of speed than the location identifier.

NAUTICAL MILES - STATUTE MILES: NEW DIMENSIONAL UNIT PROCEDURES: Among the various segments of the aviation industry there are many users of the airspace who desire to use nautical units for speed and distance measurements in their operations while others prefer the use of statute units. A plan designed to best serve the interests of all concerned has been developed and will be placed in effect on October 1, 1954. The plan generally provides that the pilots of all air carrier aircraft and all military aircraft shall use nautical units exclusively in all of their operations whether IFR or VFR. Private and business aircraft pilots, on the other hand, may use either nautical or statute units according to their preference.

Since uniformity is essential to the efficient operation of the Federal Airways System, all CAA facilities (communications stations, airport traffic control towers and air route traffic control centers) will use knots and nautical miles as the standard for all internal operations involving speed and distance values. Also, all normal radio transmissions of speed and distance values by these facilities will be in terms of knots and nautical miles with the exception of visibility which will continue to be reported and transmitted in statute miles. Any speed or distance value (except those associated with radar traffic control) will be converted from nautical to statute units by CAA facilities upon receipt of specific requests from pilots of private and business aircraft.

At the present time, surface wind velocity is reported in miles per hour. Beginning October 1, surface wind velocity will be reported in knots. Hence, when surface wind is reported as "west south west eight" it will be eight knots rather than eight miles per hour. This change need be of no great concern to the pilot, however, since, until a velocity of thirty miles per hour or more is reached, the difference between miles per hour and knots is so slight as to be insignificant for all practical purposes. In any case, if the pilot of a private or business aircraft wants the wind velocity in miles per hour, the CAA facility will convert it upon request.

When filing IFR flight plans and conducting IFR flight, distance and speed information submitted to CAA facilities by all pilots should, if possible, be in nautical units since the ground system will operate on the basis of nautical units. If statute units are used by the private or business aircraft pilot, they should be identified as such in each case; i.e., "airspeed 110 miles per hour". The CAA facility will then convert the value to knots for internal use.

CIVIL AIRWAY, CONTROL AREA EXTENSION, AND REPORTING POINT AMENDMENTS: Effective September 14, 1954, civil airways, control area extensions and reporting points are amended in whole or in part as follows:

CIVIL AIRWAYS: (1) Amber Civil Airway No. 2 (Long Beach, Calif., to Umiat, Alaska) is amended before "Daggett, Calif., radio range station" to read: "From the intersection of the southwest course of the LongBeach, Calif., radio range and the south course of the Los Angeles, Calif., VHF VAR radio range via the Long Beach, Calif., radio range station; the intersection of the northeast course of the Long Beach, Calif., radio range and the east course of the Los Angeles, Calif., radio range; Daggett, Calif., radio range station."

(2) Red Civil Airway No 2 is amended by changing caption to read: "(Whitehall, Mont. to Rapid City, S. Dak.), and by changing first portion to read: "From the Whitehall, Mont., radio range station to the Bozeman, Mont., radio range station." (Note: Above change deletes portion from Butte, Mont., rng stn to Whitehall, due to decommissioning Butte range station 9/14/54)

(3) Red Civil Airway No. 20 (Lansing, Mich., to Washington, D. C.) is amended between Lansing and Flint, Mich., to read: "That airspace over United States territory from the Lansing, Mich., radio range station via the Flint, Mich., ILS outer marker; the intersection of the NW course of the Selfridge AFB, Mich., radio range and the northwest course of the Windsor, Ont., Canada radio range."

(4) Red Civil Airway No. 48 is amended by changing the caption to read: "(Helena, Mont. to Livingston, Mont.)" and is amended to read: "From the intersection of the southeast course of the Helena, Mont., radio range and the northwest course of the Bozeman, Mont. radio range via a point located at lat. 46°15' 00", long. 111°00' 00". to the Livingston, Mont. radio range station." (Note: Above deletes portion between Missoula, Mont. rng stn and Craig Intersection)

(5) Red Civil Airway No. 65 (Oceanside, Calif., to Blythe, Calif.) is amended to read: "From the intersection of the southwest course of the Long Beach, Calif., radio range and the south course of the Los Angeles, Calif., VHF VAR radio range via the Oceanside, Calif., non directional radio beacon; Julian, Calif., non directional radio beacon to the Hayfield Lake Calif., non-directional radio beacon."

(6) Blue Civil Airway No. 16 is amended by changing the caption to read: "(Helena, Mont to Great Falls, Mont.) and is amended to read: "From the intersection of the west course of the Helena, Mont., radio range and the southwest course of the Great Falls, Mont., radio range to the intersection of the southwest course of the Great Falls, Mont., radio range and the north course of the Helena, Mont., radio range." (Note: Above deletes portion of Blue 16 from Dillon via Butte to Garrison intersection due to decommissioning Butte LF range 9/14/54)

(7) Blue Civil Airway No. 24 (El Centro, Calif., to Daggett, Calif.) is revoked.

(8) Blue Civil Airway No. 58 (Nantucket, Mass., to Squantum, Mass.) is added to read: "From the Nantucket, Mass., non-directional radio beacon via the Hyannis, Mass., non-directional radio beacon; the intersection of a line bearing 346° true from the Hyannis, Mass., non-directional beacon and the southeast course of the Squantum, Mass., radio range to the Squantum, Mass., radio range station, excluding the portion in conflict with Cotuit Danger Area. (D-79).

(9) VOR Civil Airway No. 4 (Seattle, Wash., to Washington, D.C.) is amended by changing all between the St. Louis, Mo., omnirange station and the Evansville, Ind., omnirange station to read: "St. Louis, Mo., omnirange station, including a north and a south alternate; Centralia, Ill., omnirange station, including a north and a south alternate; Evansville, Ind., omnirange station, including a south alternate."

(10) VOR Civil Airway No. 12 (Palmdale, Calif., to Philadelphia, Pa.), is amended by changing the portion between the Anthony, Kans., omnirange station and the Emporia, Kans., omnirange station to read: "Anthony, Kans., omnirange station, including a north alternate; Wichita, Kans., omnirange station, including a north alternate via the intersection of the Anthony omnirange 030° true and the Wichita omnirange 253° true radials and also a south alternate via the intersection of the Anthony omnirange 078° true and the Wichita omnirange 194° true radials; Emporia, Kans., omnirange station, including a north alternate via the intersection of the Wichita omnirange 045° true and the Emporia omnirange 259° true radials; " and by changing all after the Pittsburgh, Pa., omnirange station to read: "Pittsburgh, Pa., omnirange station; Harrisburg, Pa., omnirange station to the West Chester, Pa., omnirange station, including a north alternate via the intersection of the Harrisburg omnirange 086° true and the West Chester omnirange 304° true radials."

(11) VOR Civil Airway No. 21 (Long Beach, Calif., to United States-Canadian Border), is amended by changing all before the Daggett, Calif., omnirange station to read: "From the point of intersection of the Long Beach omnirange 225° true radial and the Los Angeles, Calif. VAR south course via the Long Beach, Calif., omnirange station; Ontario, Calif., omnirange station; Daggett, Calif., omnirange station."

(12) VOR Civil Airway No. 23 (San Diego, Calif., to Bellingham, Wash.), is amended between the Fort Jones, Calif., omnirange station and the Eugene, Oreg., omnirange station to read: "Fort Jones, Calif., omnirange station; Medford, Oreg., omnirange station, including an east alternate via the intersection of the Fort Jones omnirange 042° true and the Medford omnirange 157° true radials; Eugene, Oreg., omnirange station,"

(13) VOR Civil Airway No. 64 (Long Beach, Calif., to Blythe, Calif.), is amended to read: "From the point of intersection of the Long Beach omnirange 271° true radial and the Los Angeles, Calif., VAR south course via the Long Beach, Calif., omnirange station; Thermal, Calif., omnirange station to the Blythe, Calif., omnirange station."

(14) VOR Civil Airway No. 67 (Mason City, Iowa, to Rochester, Minn.), is amended to read: "From the Mason City, Iowa, omnirange station to the Rochester, Minn., omnirange station, including a west alternate."

(15) VOR civil airway No. 116 (Chicago, Ill., to New York, N.Y.), is amended to read: "From the Naperville, Ill., omnirange station via the South Bend, Ind., omnirange station; Litchfield, Mich., omnirange station, including a north alternate; Detroit, Mich., omnirange station, including a north alternate via the intersection of the Litchfield omnirange 061° true and the Detroit omnirange 276° true radials; Erie, Pa., omnirange station; Bradford, Pa., omnirange station; Wilkes-Barre-Scranton, Pa., omnirange station; intersection of the Wilkes-Barre-Scranton omnirange 117° true and the Allentown, Pa., omnirange 053° true radials; to the point of intersection of the Wilkes-Barre-Scranton omnirange 117° true and the Wilton, Conn., omnirange 233° true radials."

(16) VOR Civil Airway No. 117 (El Centro, Calif., to Daggett, Calif.), is added to read: "From the El Centro, Calif., LF radio range station via the intersection of the El Centro radio range northwest course of the Thermal omnirange 158° true radial; Thermal, Calif., omnirange station; to the Daggett, Calif., omnirage station."

(17) VOR Civil Airway No. 141 (Nantucket, Mass., to Plattsburg, N. Y.), is amended to read: "From the Nantucket, Mass., omnirange station via the intersection of the Nantucket omnirange 339° true and the Boston omnirange 133° true radials; Boston, Mass., omnirange station; Concord, N. Y., omnirange station; Lebanon, N. H., non-direction radio beacon to the Plattsburg, N. Y., omnirange station."

(18) VOR Civil Airway No. 164 (Canton, Pa., to New York, N. Y.), is added to read: " "From the point of intersection of the Elmira, N. Y., omnirange 168° true radial and a line bearing 290° true from the Wilkes-Barre-Scranton, Pa., LF radio range station via the Wilkes-Barre-Scranton, Pa., LF radio range station; to the Caldwell, N. J., omnirange station."

(19) VOR Civil Airway No. 165 (Long Beach, Calif., to Palmdale, Calif.), is added to read: "From the Long Beach, Calif., omnirange station via the intersection of the Long Beach omnirange 346° true and the Palmdale omnirange 200° true radials to the Palmdale, Calif., omnirange station."

CONTROL AREAS: (1) Blue Civil Airway No. 24 (El Centro, Calif., to Daggett, Calif.) is revoked.

(2) Blue Civil Airway No. 58 (Nantucket, Mass. to Squantum, Mass.), is added to read: "All of Blue civil airway No. 58."

(3) VOR Civil Airway No. 67 (Mason City, Iowa, to Rochester, Minn.), is amended to read: "All of VOR Civil Airway No. 67 including a west alternate."

(4) VOR Civil Airway No. 116, (Chicago, Ill., to New York, N. Y.), is amended to read: All of VOR Civil airway No. 116 including north alternates."

(5) VOR Civil Airway No. 117 (El Centro, Calif., to Daggett, Calif), is added to read: "All of VOR civil Airway No. 117."

(6) VOR Civil Airway No. 141 (Nantucket, Mass., to Plattsburg, N. Y.), is amended to read: "All of VOR civil airway No. 141."

(7) VOR Civil Airway No. 164 (Canton, Pa., to New York, N. Y.,), is added to read: "All of VOR civil airway No. 164."

(8) VOR Civil Airway No. 165 (Long Beach, Calif., to Palmdale, Calif.), is added to read: "All of VOR civil airway No.165."

CONTROL AREA EXTENSIONS: (1) (Pensacola, Fla.) is amended to read: "That airspace within 10 miles east of the north and south courses of the Pensacola, Fla., radio range extending from Red civil airway No. 30 on the north to a point 12 miles south of the radio range station and within 5 miles west of the south course of the Pensacola radio range extending from the radio range station to a point 12 miles south."

(2) (Great Falls, Mont.) is amended by adding the following to present control area extension: "including the airpsace within a 30 mile radius of the Great Falls omnirange station which lies within the north quadrant of the Great Falls low frequency radio range."

(3) (Moline, Ill.) is amended to read: "That airspace within a 15 mile radius of the

Moline omnirange station, within 5 miles either side of the Moline ILS localizer west course extending from the localizer to a point 35 miles west of the Quad City Airport, and the airspace east of Moline bounded on the north by Green civil airway No. 3, on the south by a line 5 miles south of and parallel to the Moline ILS localizer east course, on the east by long. 90°02'00" and on the west by VOR civil airway No. 63."

(4) (Thermal, Calif.) is amended to read: "Within 5 miles either side of the 80° true radial of the Thermal omnirange extending from the omnirange station to the Hayfield Lake, Calif., non-directional radio beacon."

(5) (Kodiak, Alaska) is added to read: "Within 5 miles either side of the south course of the Kodiak radio range extending from the radio range station to a point 20 miles south."

(6) (Philadelphia, Pa.) is added to read: "That airspace within a 25 mile radius of the Philadelphia International Airport."

(7) (Sedalia, Mo.) is added to read: "That airspace within a 35 mile radius of the Sedalia AFB excluding that portion north of Sedalia bounded on the south by VOR civil airway Nos. 4-S and 12-S, excluding the portion northwest of Sedalia bounded on the east by long. 93°45'00" and on the south by lat. 38°45'00", and excluding the portion northeast of Sedalia bounded on the west by long. 93°15'00" and on the south by lat. 38°45'00"."

(8) (Charleston, W. Va.) is added to read: "That airspace within a 30 mile radius of Kanawha County Airport, Charleston, W. Va."

(9) (Salem, Oreg.) is added to read: "Within 5 miles either side of a line bearing 150° true from the Salem-McNary Airport extending from the airport to a point 25 miles southeast east."

CONTROL ZONES: (1) Three mile radius zones is amended by deleting the Gooding Municipal Airport, Gooding, Idaho.

(2) Five mile radius zones is amended by deleting the Nantucket Memorial Airport, Nantucket, Mass.

(3) (Amarillo, Texas) is amended to read: "Within a 5 mile radius of Amarillo Air Terminal, within 2 miles either side of the west course of the Amarillo radio range extending from the radio range station to a point 5 miles west, and within 2 miles either side of the east course of the radio range extending from the radio range station to its intersection with the northwest course of the Clarendon, Tex., radio range."

(4) (Big Spring, Texas) is amended to read: "Within a 5 mile radius of Webb AFB and within 2 miles either side of the west course of the Big Spring radio range extending from the radio range station to a point 10 miles west."

(5) (New Orleans, La.) is amended to read: "Within a 5 mile radius of Moisant International Airport, within 2 miles either side of the 221°true radial of the New Orleans omnirange extending from the omnirange station to a point 10 miles southwest, within a 2 miles either side of the ILS localizer course extending from the localizer to a point 14-1/2 miles west, within 2 miles either side of the west course of the radio range extending from the radio range station to a point 17-1/4 miles west, and within 2 miles either side of the east course of the radio range extending from the radio range station to the boundary of the New Orleans Airport five mile radius control zone."

(6) (Shreveport, La.) is amended to read: "Within a 5 mile radius of Shreveport Downtown Airport, within 5 miles either side of the northwest course of the Shreveport radio range extending from the radio range station to a point 10 miles northwest, within a 7 mile radius of Barksdale Air Force Base and within 5 miles either side of the southeast course of the Barksdale AFB radio range extending from the Air Force Base to the Elm Grove fan marker."

(7) (Cheyenne, Wyo.) is amended to read: "Within a 5 mile radius of the Cheyenne Municipal Airport, within 2 miles either side of the northwest course of the Cheyenne radio range extending from the radio range station to a point 12 miles northwest, within 2 miles either side of the east course of the radio range station to a point 11-1/2 miles east, within 2 miles either side of the ILS localizer course extending from the localizer to a point 10 miles east of the airport, and within 2 miles either side of the 32° true radial of the Cheyenne omnirange extending from the omnirange station to a point 10 miles northeast."

(8) (Pueblo, Colo.) is amended to read: "Within a 5 mile radius of Pueblo Municipal Airport, within 5 miles either side of a direct line extending from the center of Pueblo Municipal Airport to the Pueblo radio range station to include a 5 mile radius of the Pueblo radio range station, within 2 miles either side of the southeast course of the radio range extending from the radio range station to a point 10 miles southeast, and within 2 miles either side of the 181° true radial of the Pueblo omnirange extending from the omnirange station to a point 10 miles south."

(9) (Miami, Fla.) is amended to read: "Within a 5 mile radius of Miami International Airport and within 2 miles either side of the east and west courses of the Miami radio range extending from the five-mile radius zone to a point 10 miles west of the radio range station."

(10) ELSBERRY, MO. INTSXN- intersection of the 323° magnetic radial of the St. Louis, Mo. Omnirange and the 270° magnetic radial of the Vandalia, Illinois Omnirange.

(11) BAY INTSXN - intersection Cleveland VOR radial 278° magnetic and Mansfield VOR radial 348° magnetic.

(12) NORWALK INTSXN - intersection Cleveland VOR radial 253° magnetic and Mansfield VOR radial 338° magnetic.

(13) STILLWATER, N.J. INTSXN - intersection direct radials Allentown VOR and Poughkeepsie VOR with direct course Caldwell, N.J. VOR to Wilkes-Barre-Scranton, Pa. LFR.

(14) WHEELERVILLE, PA., INTSXN - intersection Bradford, Pa.-Wilkes-Barre Scranton Pa. VOR direct radials with direct course Caldwell, N. J. VOR to Wilkes-Barre-Scranton, Pa., LFR.

(15) WAYNE INTSXN - intersection of the Charleston, W. Va., VOR radial (264° mag) with a (360° mag) bearing to the Huntington, W.Va. "H" facility.

(16) COATESVILLE INTSXN - intersection of the West Chester, Pa., VOR (297° mag) with Reading, Pa., ILS south course.

CANCEL

(17) SNAPPER INTSXN (VHF) - intersection of the West Palm Beach 013° magnetic and the Vero Beach 042° magnetic radials.

(18) SNAPPER INTSXN (LF) - intersection of the north course of the West Palm Beach and the east course of the Melbourne LF ranges.

REDESCRIBE

(19) TARPON INTSXN (VHF) - intersection of the West Palm Beach 013° magnetic and the Daytona 126° magnetic radials. Minimum reception altitude 7,000'.

(20) BONITA INTSXN (VHF) - intersection of the Wrst Palm Beach 013° magnetic and the Vero Beach 142° magnetic radials. Minimum reception alttiude 1,500'.

(21) SHARK INTSXN (VHF) - intersection of the West Palm Beach 035° magnetic and the Daytona Beach 126° magnetic radials. Minimum reception altitude 14,000'.

(22) DADE CITY, FLA. INTSXN- intersection 257° mag rad Orlando and 046° mag rad Tampa.

✓ NON-STANDARD HOLDING PATTERNS: Effective immediately the following non-standard holding patterns are established;

(1) WARSAW INTSXN - direction from holding point -NE on Cincinnati VOR 217°magnetic radial- direction of turn - LEFT - Time - two minutes.

(2) MT. HEALTHY INTSXN - direction from holding point - N on Cincinnati VOR 022° radial - direction of turn - LEFT - Time- two minutes.

(3) NEW BALTIMORE INTSXN - direction from holding point - N; direction of turn - RIGHT on the W side of the N course of the Cincinnati ILS lclzr; Time - one minute.

✓ DANGER AREA AMENDMENT: The following Danger Area Amendment shall be effective September 3, 1954.

AMENDMENT NO. 87, PART 608 - DANGER AREAS

(1) In Section 608.61, the Kodiak Island, Alaska, area (D-350), published on July 16, 1949, in 14 F.R. 4298, is amended by changing the "Description by Geographical Coordinates" column to read: "N boundary: lat. 57°30'00"; E boundary: long. 150°53'00"; S boundary: lat. 57°00'00"; W boundary: long. 151°24'00'."

✓ AERONAUTICAL CHART CORRECTION: Correct Chicago Sectional Chart dated June 23, 1954 by changing west radial figure of Pontiac, Illinois, VOR from 225° to 255°.

✓ FLIGHT INFORMATION MANUAL CORRECTIONS: Correct Flight Information Manual, Volume 8, dated May 25, 1954, as follows:

CHANGES IN INSTRUMENT APPROACH PROCEDURE MINIMUMS: Starting with Volume 9, Number 11 dated August 10, 1954, the Airman's Guide began to publish some instrument approach procedures with the lowest landing and take-off minimuns possible under the obstruction clearance requirements of the Regulations of the Administrator, Part 609. These minimums apply to all users except military aircraft and those for whom the Administrator has specifically authorized other minimums. Further details may be found in the note preceding the Pittsburgh, Pa., (Allegheny County Airport) VOR on page 23 of this issue. However, all users are warned that the lowering of these minimums published in the Airman's Guide does not necessarily imply that obstructions have been lowered or removed.

VOR RECEIVER CHECK SIGNALS

Provisions are being made to provide pilots with a means of checking the accuracy of VOR receivers to insure satisfactory operations of the airborne system. These provisions consist of three different methods: (a) a radiated test signal consisting of a signal radial; (b) certified check points on the airport surface, or (c) certified airborne check points. The radiated test signal is used by tuning the receiver to the published frequency of the test facility. With the flight path deviation indicator (FPDI) centered the omnibearing selector should read 0° with the to-from indication being "From" or the omnibearing selector should read 180° with the to-from indication read "To" Should the VOR receiver be of the automatic indicating type the indication should be 180°. (This is true for all airborne receivers except Mitchell which will indicate 0°). Two means of identification are used with the VOR radiated test signal. In some cases, a continuous series of dots is used while in others a continuous 1020 cycle tone will identify the test signal. Information as to identification of an individual test signal can be obtained from the local control tower. Ground and airborne check points consist of certified radials that should be received at specific points on the airport surface or over specific landmarks while airborne in the immediate vicinity of the airport. Pilots are requested to contact control tower, communication station or airport manager for location details. Should an error in excess of ± 4° be indicated through use of the ground check or ± 6° using the airborne check, IFR flight should not be attempted without first correcting the source of error. CAUTION, no correction other than the "correction card" figures supplied by the manufacturer should be applied in making these VOR receiver checks. As of August 23, 1954, check points or facilitites have been established at the following airports (listed under city name).

NOTICE: Starting with Vol. 9 #11 (8/10/54) the Airman's Guide began to publish some instrument approach procedures with the lowest landing and take-off minimums possible under the obstruction clearance requirements of the Regulations of the Administrator, Part 609. Below is the only one contained in this issue. These minimums apply to all users except military aircraft and those for whom the Administrator has specifically authorized other minimums. ILS and GCA (PAR) straight-in landing minimums, formerly published no lower than 400-3/4, may in some instances be lowered to 200-1/2. Straight-in LFR, ADF and VOR landing minimums, formerly no lower than 500-1, may in some instances be lowered to 400-1. There are now three categories of aircraft minimums, namely those for (1) 75 mph or less - 2-engine or less, (2) more than 75 mph - 2-engine or less, and (3) more than 75 mph - more than 2 engine. All users are warned that the lowering of these minimums published in the Airman's Guide does not necessarily imply that obstructions have been lowered or removed.

GROUND CONTROLLED APPROACH SYSTEM PROCEDURES

When a GCA instrument approach is conducted at the below named airport(s), it shall be in accordance with the following instrument approach procedure(s), unless an approach is conducted in accordance with a different procedure authorized by the Administrator for such airport(s). Initial approaches shall be made over specified routes. Minimum altitude(s) shall correspond with those established for en route operation in the particular area or as set forth below. Positive identification must be established with the ground controller. From initial contact with GCA to final authorized landing minimums, the instructions of the GCA controller are mandatory except when (A) visual reference with the ground is established on final approach at or before descent to the authorized landing minimums, or (B) at pilot's discretion if it appears desirable to discontinue the approach.

ALWAYS CHECK NOTICES TO AIRMEN SECTION

INSACS = Interstate Airway Communications Station/s (CAA)

VHF OMNI-RANGE: "Non-commissioned" VHF omni-ranges may lack certain items, such as monitoring or control equipment or may not have been flight-checked and are subject to shut-down at any time without notice. The courses may or may not be within the prescribed tolerances and the station is to be used accordingly.

VAR AND VOR MONITORING CLASSIFICATION FOR AIR TRAFFIC CONTROL PURPOSES: Category I (VAR) = Following conditions must be met: (A) The visual course alignment and signal level are monitored continuously. (B) The aural "A" or "N" sector signal is monitored continuously by the communicator at the associated INSACS. (C) The station identification is monitored continuously by the communicator at the associated INSACS. (D) The aural course alignment is monitored at least once each hour by the communicator at the associated INSACS. Category I (VOR) = Course alignment and signal level are monitored continuously. NOTE: Category I indicated by parenthetical (1). Category II (VAR only) = If all except (D) of the conditions of Category I are met. NOTE: Category II indicated by parenthetical (2). Category III = Facility monitored soley through use of automatic visual course and signal level monitor with automatic transfer unit. This category may permit VOR to be inoperative for a limited period before a notice to airmen is issued. Normally, VHF ranges which are not controlled by an INSACS, and located too distant from INSACS to be monitored with a VHF receiver will fall into Category III. NOTE: Category III indicated by parenthetical (3).

NOTE: Letters between range courses are quadrant identifiers, e.g., "90 YN 180", indicates the quadrant between the two courses is a yellow N quadrant. The letter immediately following a range course indicates whether the course is aural or visual, i.e., "Y" or "B", for yellow or blue, indicates visual: "A" or "N" aural. In the case of low frequency ranges, the A or N cited between two courses is the identification to be heard in the quadrant between those two courses.

RADIO CLASS DESIGNATIONS

AC. . . . . Approach Control Tower, CAA (transmits on voice channel of associated ranges and ILS in addition to frequencies listed)
B. . . . . Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes)
C. . . . . Control Tower, CAA
CI. . . . . Control Tower, (City, County, Private, etc.)
D. . . . . Distantly controlled
DME. . . . Distance Measuring Equipment
FM. . . . . VHF fan marker (100 watts)
GCA. . . . Ground Controlled approach system
H. . . . . Non-directional radio beacon (homing), power 50 watts to less than 2000 watts
HH. . . . . Non-directional radio beacon (homing), power 2000 watts or more
ILS. . . . Instrument Landing System (voice on localizer channel)
J. . . . . L/MF (200-415 kc) voice facility on other than range frequency
LFM. . . . VHF fan marker, low powered (5 watts)
LMM. . . Compass locator station when installed at middle marker site
LOM. . . . Compass locator when installed at outer marker site
LVOR. . . Low power VOR (with standby equipment)
MH. . . . . Non-directional radio beacon (homing) power less than 50 watts
ML. . . . . Range (loop radiators), power less than 50 watts
MM. . . . VHF middle marker
MOR. . . . Low frequency omni-drectional range
MRA. . . . Range (adcock, vertical radiators), power 50 or more, but less than 150 watts
MRL. . . . Range (loop radiators), power 50 or more, but less than 150 watts
OM. . . . . VHF outer marker
P. . . . . Point-to-Point radio
RA. . . . . Range (adcock, vertical radiators), power 150 watts or more
RAPCON Radar Approach Control Center.
RL. . . . . Range (loop radiators), power 150 watts or more
S. . . . . Simultaneous range, homing and voice signals available. Inclusion suffix "W" indicates range and homing signals only
T. . . . . Teletype
TVOR. . . Low power VOR (no standby equipment) located on airport
TX. . . . . Principal teletype
V. . . . . Additional VHF voice feature on other than range frequency
VAR. . . . Visual-aural VHF range
VOR. . . . VHF omni-directional range (omni-range)
W. . . . . Without voice facilities on range frequency
Z. . . . . VHF station location marker at a range station

NOTES

1. Range courses are magnetic in-bearings
2. All CAA MH facilities operate continuously unless cited as follows: (on req)
3. All CAA ranges operate continuously. Those which are not manned continuously are cited in the remarks column with hours of operation in parentheses, e.g., (6-24)
4. VHF and LF/LMF ranges listed with the same identifier are controlled by the same INSACS. Due to space limitations the DTV and communication frequencies which are listed with the LF/LMF facility are not repeated with the VOR facility

Pilots are requested to indicate when calling C.A.A. airway communications stations and control towers the frequency on which the reply is expected.

RADAR AVAILABLE : How and Where

(9-7-54)

PAR = Precision Approach Radar. ASR = Airport Surveillance Radar. GCA = Ground Controlled Approach - Military Equivalent of Combined ASR and PAR Equipment. ARSR = Air Route Surveillance Radar. RAPCON = Radar Approach Control Center.

GROUND CONTROLLED APPROACHES - The only airborne equipment required for ground controlled approaches is a functioning radio transmitter and receiver. There are two types of ground controlled approaches - Precision and Surveillance (PPI).

PRECISION APPROACHES - Aircraft are guided to final approach to the designated instrument runway The final approach flight path on a precision scope (PAR) is greatly expanded for increased accuracy and furnishes the controller with range, azimuth and altitude information. This permits the controller to accurately guide aircraft to touchdown on the runway.

SURVEILLANCE or PPI APPROACHES - Only the ASR scope is used and aircraft may be directed to any selected runway over approximately the same flight path the pilot would take if flying VFR. This scope furnishes range and azimuth information only. Since no altitude information is available to the controller, pilots must control their descent based on the glide angle desired, and the distance from the runway as furnished by the controller. Because ASR does not permit the same degree of accuracy as PAR, the weather minimums for this type of approach are at least as high as, and in some instances higher than, the regular circling minimums listed in the Flight Information Manual for the airport.

RADAR ARRIVAL AND DEPARTURE CONTROL - Radar is utilized by certain radar equipped facilities to control the flight paths of arriving or departing IFR aircraft for the purpose of expediting the flow of traffic. Aircraft operating on IFR flight plans will be afforded a minimum of three miles horizontal separation unless standard non-radar vertical, lateral or longitudinal separation exists. This should not be confused with Ground Controlled Approach (GCA) which is an instrument approach aid.

CAA RADAR UNITS - Operate continuously at the locations listed. Available to all pilots, civil and military. Contact associated CAA control tower on any frequency guarded for initial instructions, or in an emergency any CAA facility for information on nearest Radar Control. Weather minimums, associated runways and GCA procedures are listed in the Flight Information Manual.

RAPCON - At certain locations, the surveillance portion of Military RAPCONS is operated by the CAA and service is available to all aircraft. These are listed below as well as in "Air Navigation Radio Aids" section under proper location.

AIR FORCE AND NAVY GCA UNITS - Available to civil pilots in emergency or by prior arrangement with C.O. of respective facility.

Contact under IFR: Pilots desiring GCA assistance during IFR conditions should call the nearest air traffic control facility (radio, airways, or tower, etc.) requesting GCA and further instructions.

Contact under VFR: VFR check-out of training flights should be arranged locally through Base Operations or the Control Tower.

Emergency: When a receiver or transmitter difficulties exist, the tower may relay GCA approach instructions to the pilot, or the GCA operator may transmit, in blind, instructions for aircraft to make 360 degree turns for identification. In either case, instructions will be followed at the pilot's discretion.

After being inoperative, GCA units require 20 to 30 minutes for warming up. Pilots should anticipate requirements for GCA in flight planning and request alerting of GCA units as far in advance as possible.

Civil Minimums at military installations established by the CAA are 400' ceiling and 1 mile visibility except in emergency unless Air Force or Navy facility being used has higher minimums. Navy units are prepared to transmit on HF from 2,000 to 18,000 kc and receive any frequency from 1,500 to 9,050 kc to aid any plane in emergency.

RADAR FLIGHT ADVISORY SERVICE: This service to aircraft encountering severe weather condition may be obtained by requesting radar advisory through an appropriate ground station or direct ARTC communication. ARTC will determine if service can be provided and will request pilot to change to appropriate frequency for direct communication with radar. Radar station will be identified by "THIS IS AIR FORCE RADAR ADVISORY." All suggested vectors to circumnavigate storm areas will be of advisory nature and do not relieve pilot of responsibility for safety of aircraft. If advisory service cannot be furnished for any reason, the procedure word "UNABLE" will be used. This will terminate radar advisory service to the aircraft without further explanation. This service will be available in the following ARTC Flight Advisory Areas: Chicago, St. Louis, Minneapolis, Kansas City, Albuquerque San Antonio, Ft. Worth, Oakland, Denver, Great Falls, Los Angeles and the Knoxville Air Defense Identification Zone.

CAA OPERATED RADAR UNITS

NOTE: Transmitting frequencies below 118 mc. are not guarded. Other transmitting frequencies listed are guarded plus 122.5 mc and 3023.5 kc. Transmit and guard 121.5 mc all locations.

V = 135.9, 135.0 mc transmitted. # = Guards same VHF and UHF frequencies facility transmits except 122.2, 135.0 mc. (1) = 3023.5 kc guarded. (2) = 3023.5 kc; 122.5 mc. (3) = 3023.5 kc; 122.1, 126.7, 135.9 mc. e.g., (3)-135.9, 122.1 guards every frequency in group (3) except 135.9, 122.1 mc. (g) = Twr equipped with 121.9 mc or (g.7) = Twr equipped with 121.7 mc for control of ground traffic. * = Automatic voice identification. NOTE: FIRST FREQUENCY LISTED IS THE NAVIGATIONAL AID CHANNEL; OTHERS ARE COMMUNICATIONS CHANNELS.
